Draw Fall One-Point Perspective

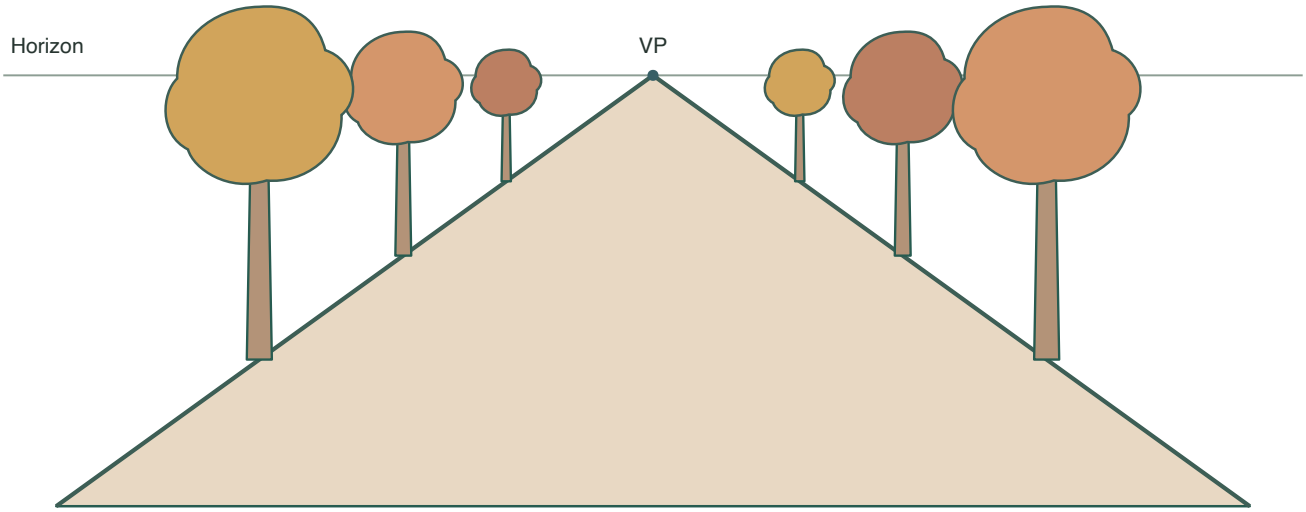
Reference I Worked example I LETTER

Original prompt

Draw a one-point perspective fall park scene: horizon line, one vanishing point, a path converging to it, and trees along the path edges that shrink toward the vanishing point.



Answer

A plate with a horizontal HL, one VP on it, a path wide at the bottom narrowing to the VP with both edges aimed at it, and six trees whose bases sit on the path edges and whose size decreases toward the VP, with warm fall canopies.

Reasoning

The path edges are the receding lines that must meet the VP; tree bases on those edges and shrinking size reinforce depth.

Check

Trace each path edge: it should pass through the VP. Confirm each trunk base touches a path edge and that trees nearer the VP are smaller.
