Reference | Worked example | A4

## Original prompt

Copy the eye square from the reference into the matching blank square, then check it against the reference.

Reference square D3

Model square D3

## Answer

The completed square shows the eye's top curve in the upper middle, a short stripe above it pointing toward the outer corner, and the cheek-fur edge meeting the square's lower edge. This matches the reference square's arrangement.

## Reasoning

Drawing the largest shape first (the eye curve) gives a stable anchor, and adding the stripe and fur edge afterward keeps their positions relative to the eye correct.

## Check

Place your square beside the reference square. The eye curve, stripe direction and fur-edge meeting point should all line up; if not, redraw the misplaced line.
