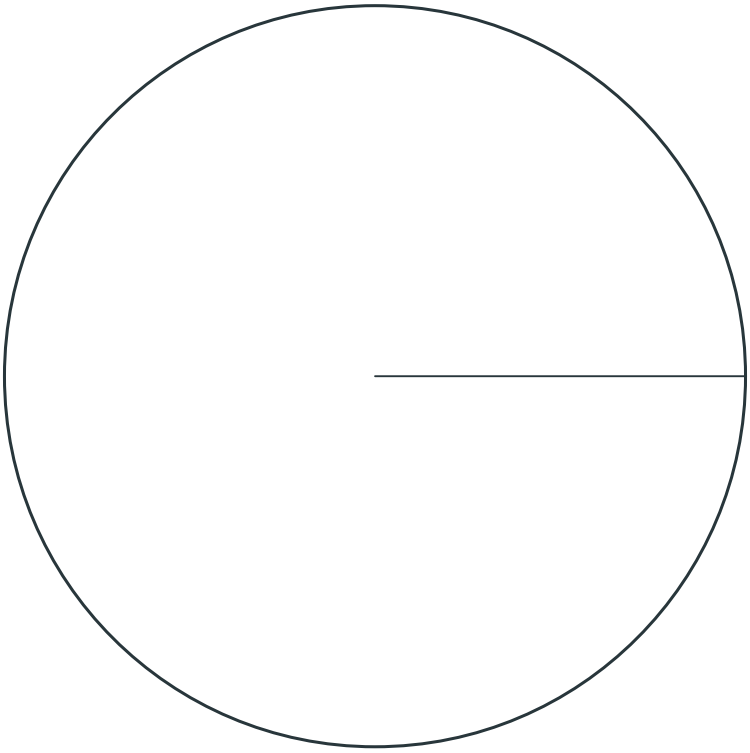
A fictional set of art cards

Fictional parts of one whole. Sector angle = count / total x 360 degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Lines=4, B Forms=6, C Color=7, D Space=3



1. Find the total count. _____

2. Calculate each percentage and sector angle. _____

3. Check the two whole-chart totals. _____

Original practice data / coordinate units, not ruler measurements / physical printing not tested

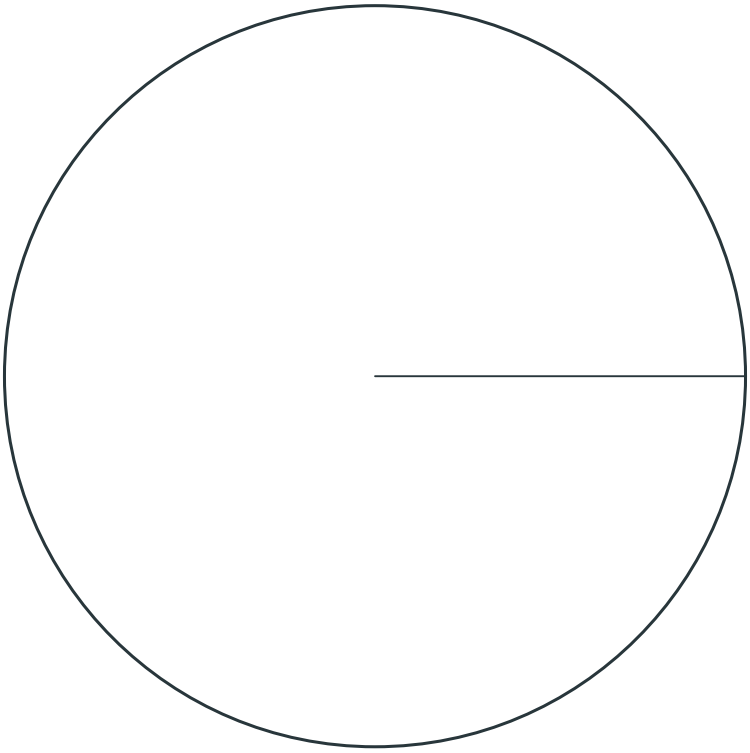
An imaginary tray of tokens

Fictional parts of one whole. Sector angle = count / total x 360 degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Moss=3, B Clay=6, C Slate=6, D Sand=9



1. Find the total count. _____

2. Calculate each percentage and sector angle. _____

3. Check the two whole-chart totals. _____

Original practice data / coordinate units, not ruler measurements / physical printing not tested

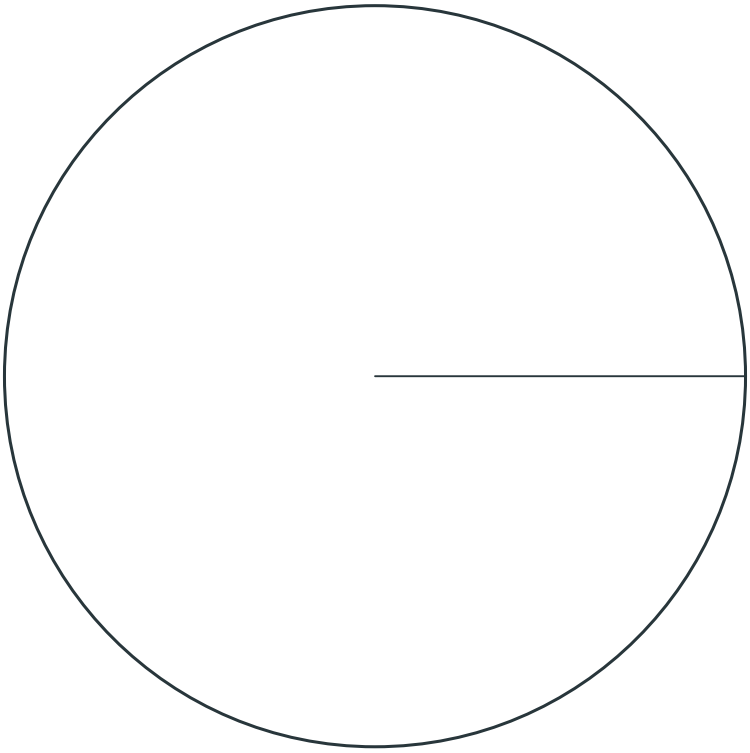
A made-up club activity split

Fictional parts of one whole. Sector angle = count / total x 360 degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Sketch=6, B Build=3, C Read=3



1. Find the total count. _____

2. Calculate each percentage and sector angle. _____

3. Check the two whole-chart totals. _____

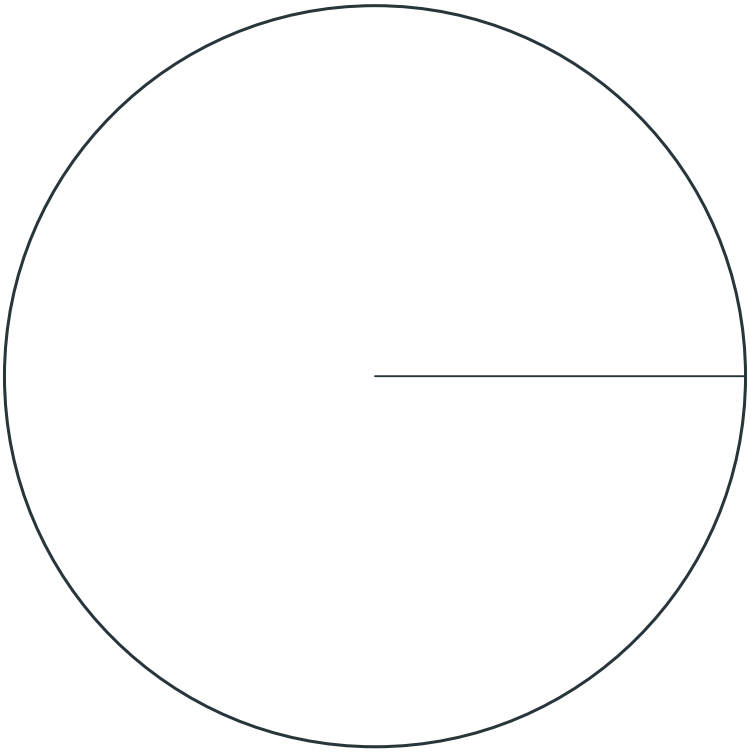
Original practice data / coordinate units, not ruler measurements / physical printing not tested

Zumola / CC BY 4.0 / Free to print, share and adapt with attribution

Fictional mosaic tiles

Fictional parts of one whole. Sector angle = count / total x 360 degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Moss=3, B Clay=4, C Slate=5, D Sand=6, E Ink=2



1. Find the total count. _____

2. Calculate each percentage and sector angle. _____

3. Check the two whole-chart totals. _____

Original practice data / coordinate units, not ruler measurements / physical printing not tested
