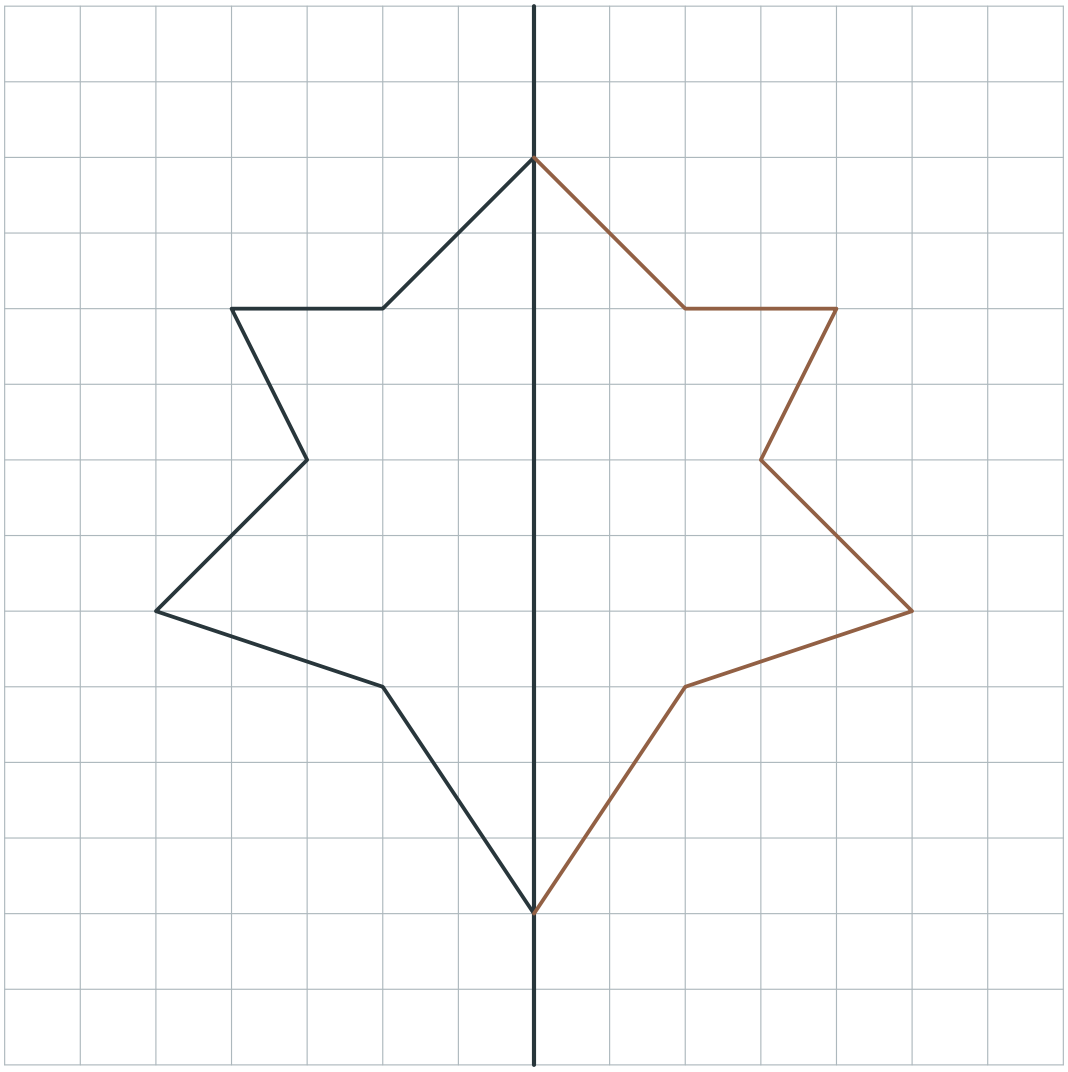
Complete the other half: SY01

Reflect the supplied half across the vertical dark axis. Each point stays the same perpendicular number of grid intervals from the axis. Points on the axis stay fixed.

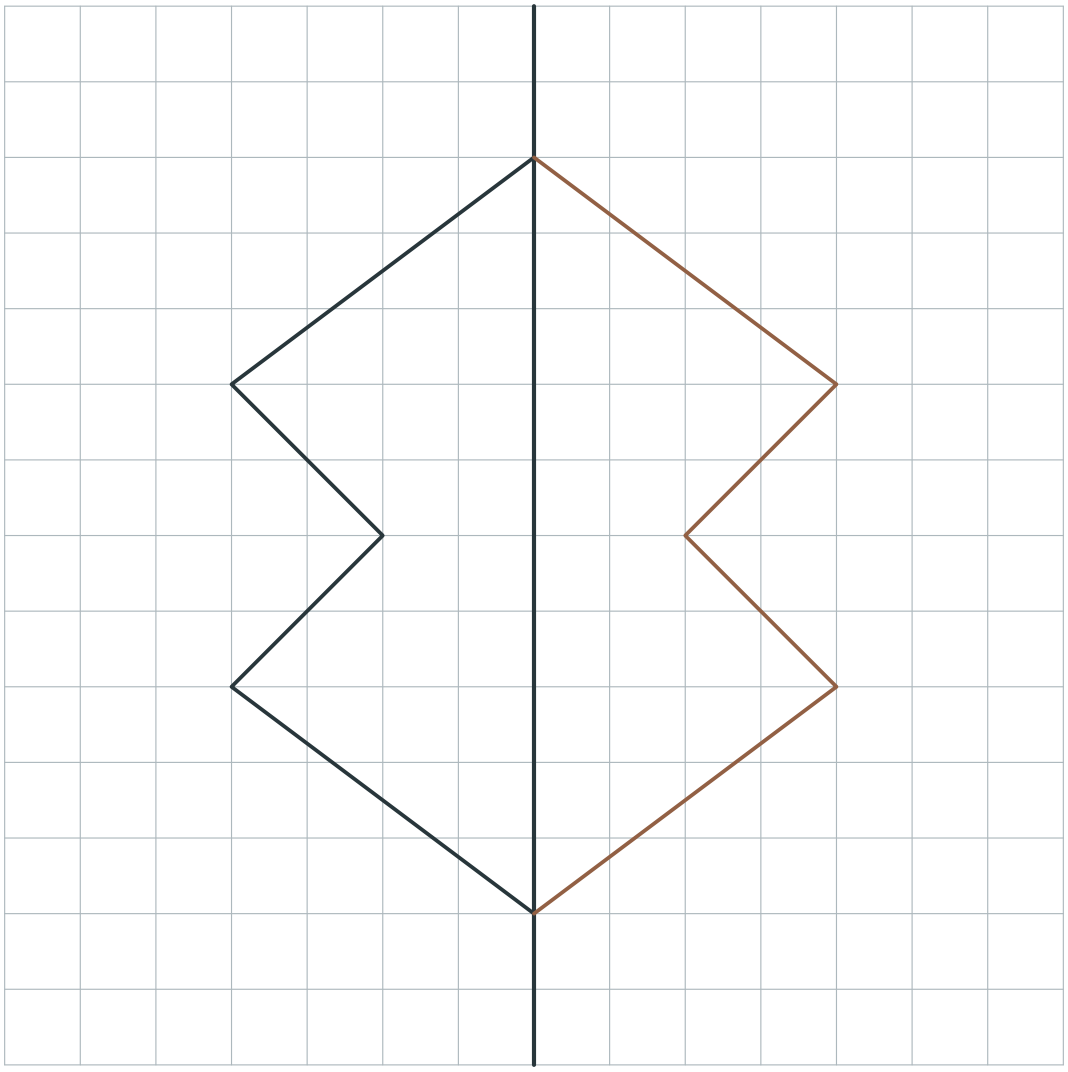


Check matched points: compare grid counts perpendicular to the axis. The completed outline combines both halves. Turn the paper if helpful; do not slide the half across unchanged.

Zumola / CC BY 4.0 / Free to print, share and adapt with attribution

Complete the other half: SY02

Reflect the supplied half across the vertical dark axis. Each point stays the same perpendicular number of grid intervals from the axis. Points on the axis stay fixed.



Check matched points: compare grid counts perpendicular to the axis. The completed outline combines both halves. Turn the paper if helpful; do not slide the half across unchanged.

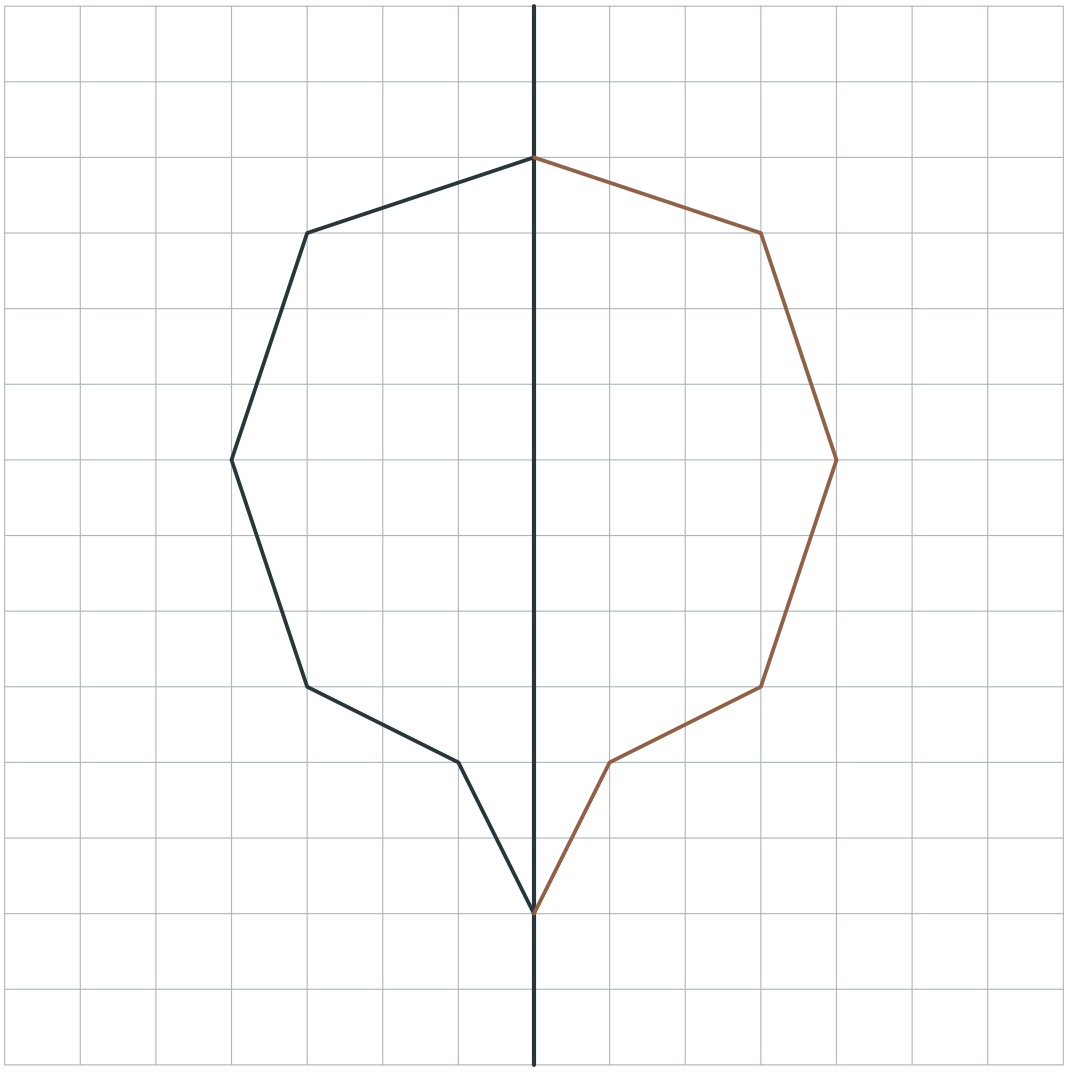
Complete the other half: SY06

Reflect the supplied half across the vertical dark axis. Each point stays the same perpendicular number of grid intervals from the axis. Points on the axis stay fixed.

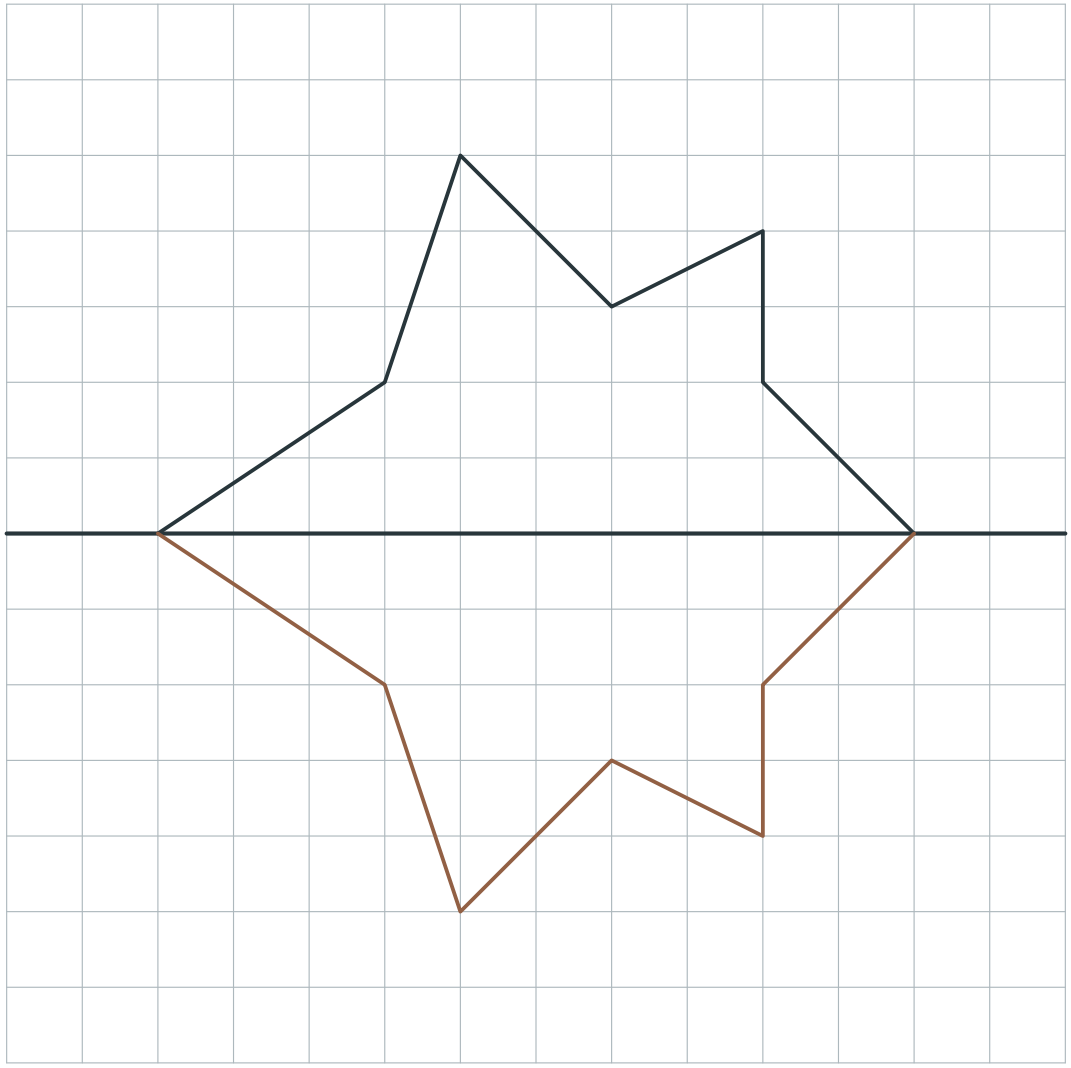


Check matched points: compare grid counts perpendicular to the axis. The completed outline combines both halves. Turn the paper if helpful; do not slide the half across unchanged.

Zumola / CC BY 4.0 / Free to print, share and adapt with attribution

Complete the other half: SY07

Reflect the supplied half across the horizontal dark axis. Each point stays the same perpendicular number of grid intervals from the axis. Points on the axis stay fixed.



Check matched points: compare grid counts perpendicular to the axis. The completed outline combines both halves. Turn the paper if helpful; do not slide the half across unchanged.
