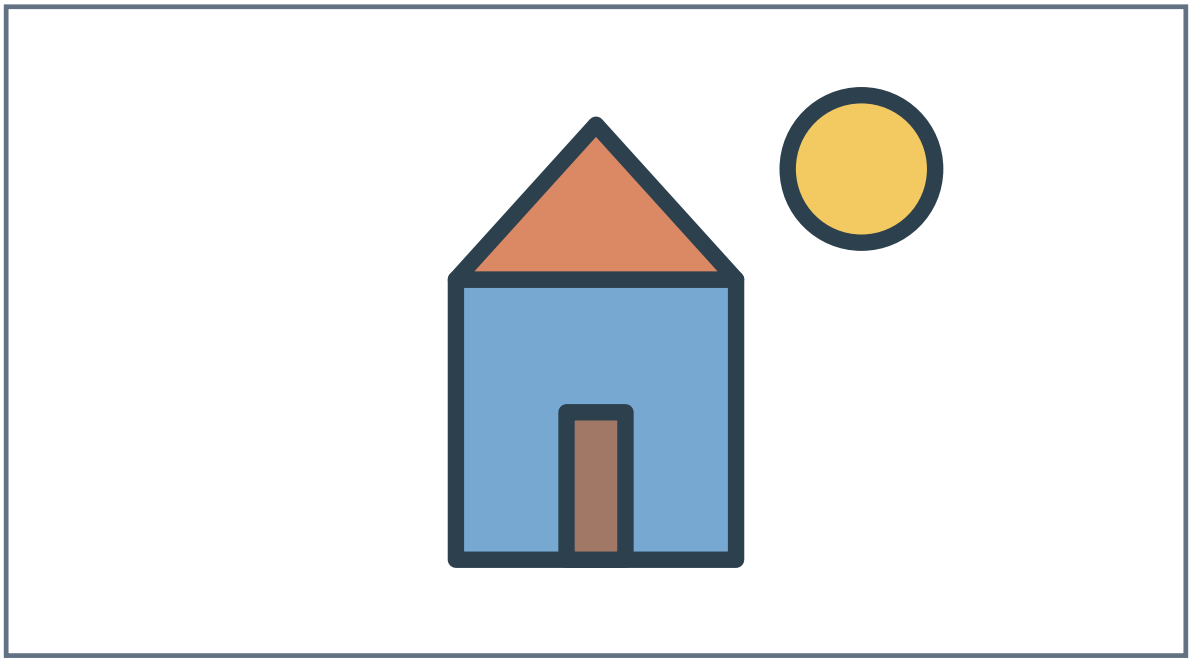
Kindergarten Coloring Drawing Worksheet

Reference | Worked example | A4

Original prompt

Look at the filled house example. It has a square body, a triangle roof, a rectangle door, and a circle sun, all with thick outlines. Each shape is colored inside with one color, and every outline is still visible.



Answer

A correct result shows the square body, triangle roof, rectangle door, and circle sun each filled with a chosen color inside the thick outline, with no color crossing outside the outlines and all outlines still clear.

Reasoning

The example teaches the two rules of the task: color goes inside each shape, and the thick outline stays visible. Following these rules on the house shows the child what a finished coloring plate looks like.

Check

Check that each of the four shapes has color inside it, that no color spills outside a thick outline, and that all four outlines can still be seen.
