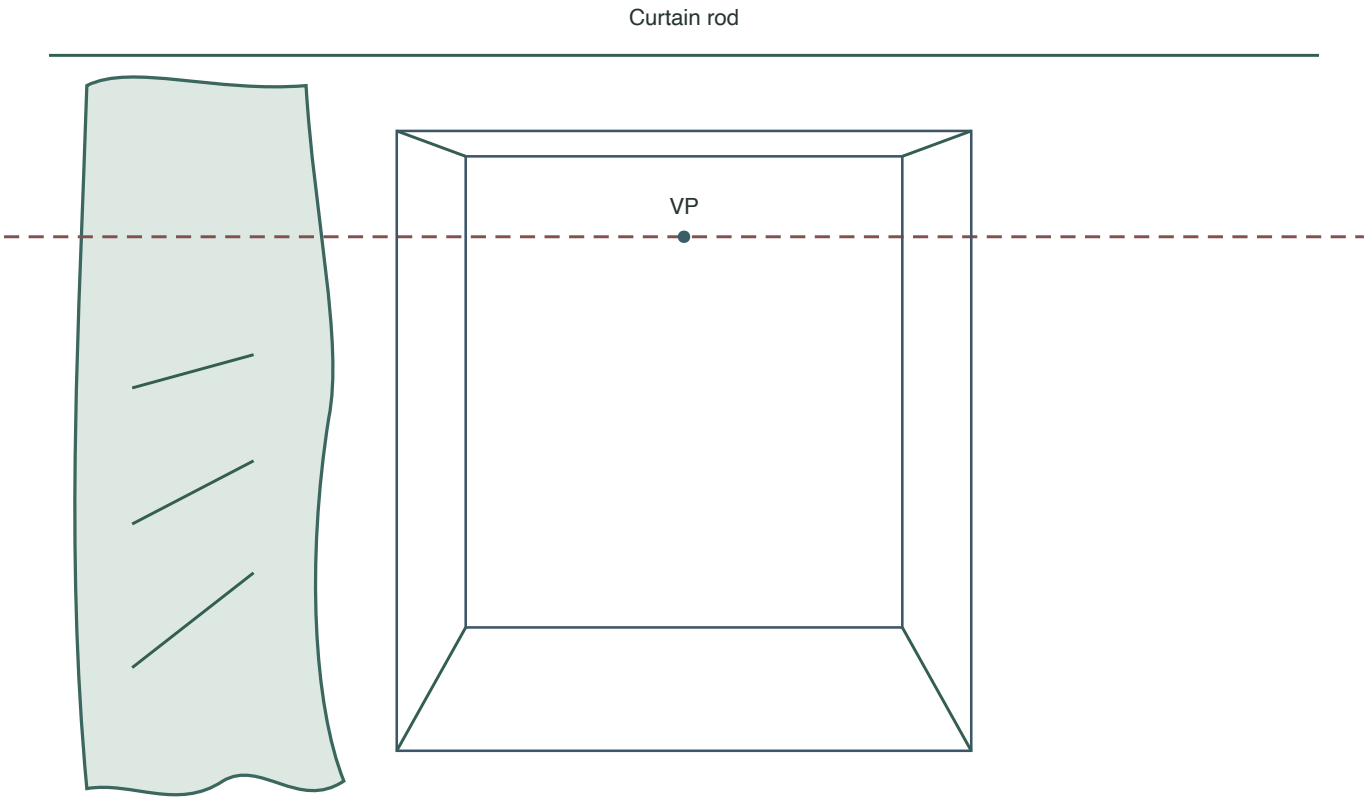
Draw One-Point Perspective Curtains

Reference | One curtain and a window recess | LETTER

Original prompt

Draw a window with reveal lines and curtain folds all converging to one VP.

Horizontal dashed line: horizon



Window opening and recessed frame

Short solid marks on the cloth show pleat depth.

Answer

A flat rectangular window opening; four short reveal lines from its corners passing through the VP; a set of curtain fold lines whose extensions all pass through the same VP, spaced wider away from the VP and closer near it.

Reasoning

In one-point perspective, depth-running edges converge to the single VP while picture-plane-parallel faces stay flat; treating curtain folds as depth-running ridges makes them obey the same convergence.

Check

Straight-edge each reveal line and fold line; all must pass through the one VP, and the window opening must remain a flat rectangle.
