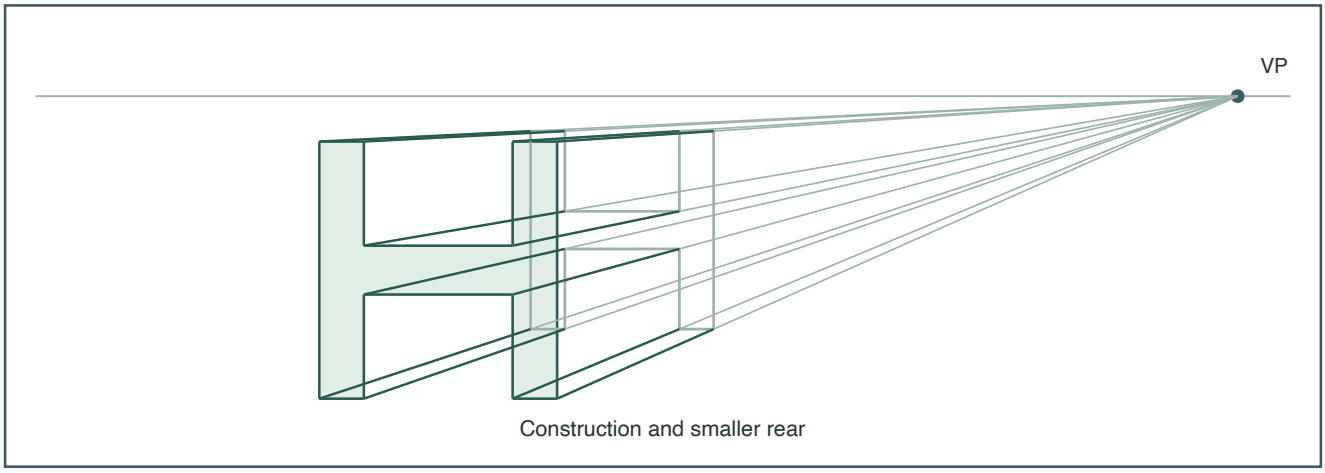
Draw One-Point Perspective Typography

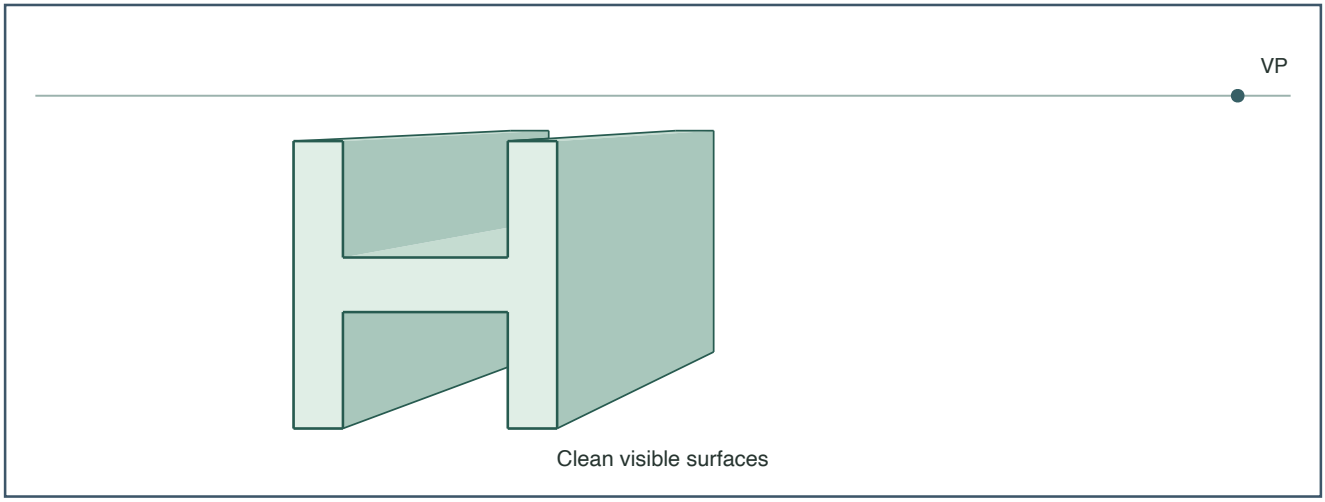
Reference I Worked example I A4

Original prompt

Worked example: extrude a block letter H in one-point perspective.



Construction and smaller rear



Clean visible surfaces

Answer

Draw the horizon and vanishing point. Draw a flat block H front face. From each outer corner, draw a light line to the vanishing point. Mark a back corner on each line, nearer the vanishing point, and connect them into a smaller H. Join matching front and back corners with straight side edges. The result is a solid H whose depth recedes to one point.

Reasoning

The front face keeps the letter readable, the sight lines fix the direction of depth, and the smaller back face plus side walls create the solid. Matching corners one-to-one prevents twisted or crossed walls.

Check

Trace each receding edge back: it should pass through the vanishing point. Confirm the back H is smaller and centred along the same sight lines as the front H.
