Grid Drawing Lion

Reference | Worked example | LETTER

Original prompt

Copy the lion's left ear and the mane curve beside it from the reference's top-left square into the matching blank square.

Reference square

Model copy

Answer

The top-left reference square contains part of the lion’s left-ear arc and an adjacent mane curve. Copy those visible curves into the same positions in the matching blank square. The ear arc passes through the square but does not touch the page’s top edge; copy only the crossings and shape actually visible, without forcing the curve to a corner.

Reasoning

Matching edge crossings keeps the ear and mane in the same place as the reference.

Check

Place the cropped reference square beside its empty matching square. Compare the ear arc and adjacent mane curve by their actual shape and visible boundary crossings; neither should be forced to the top edge or a corner.
