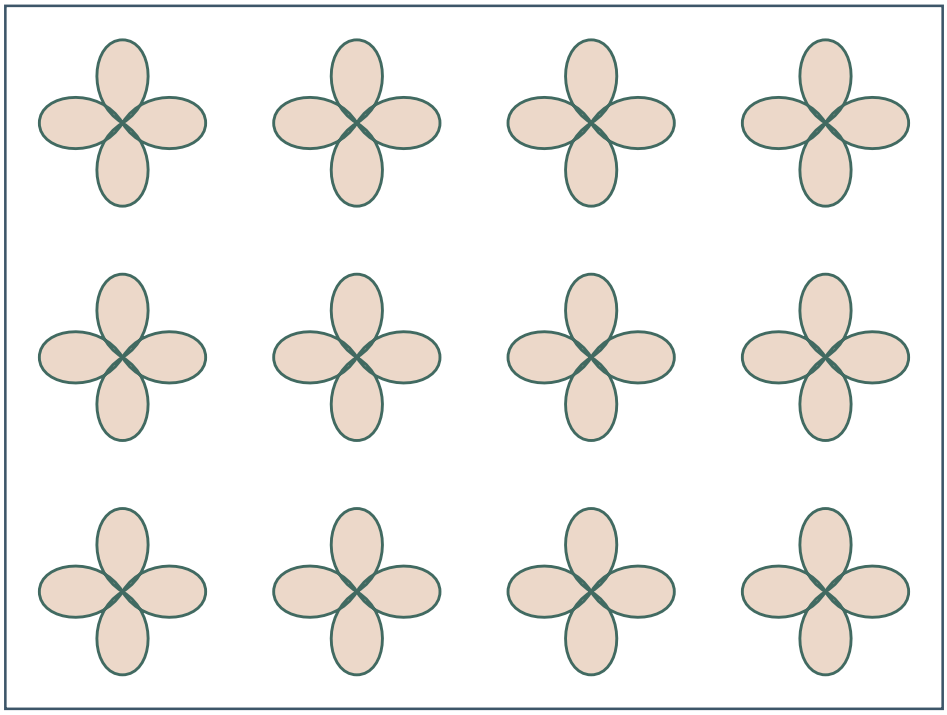
Patterned Paper

Reference I Reference layout I LETTER

Observation

A clean four-petal flower repeat. Use the worked sheet to see the construction grid.

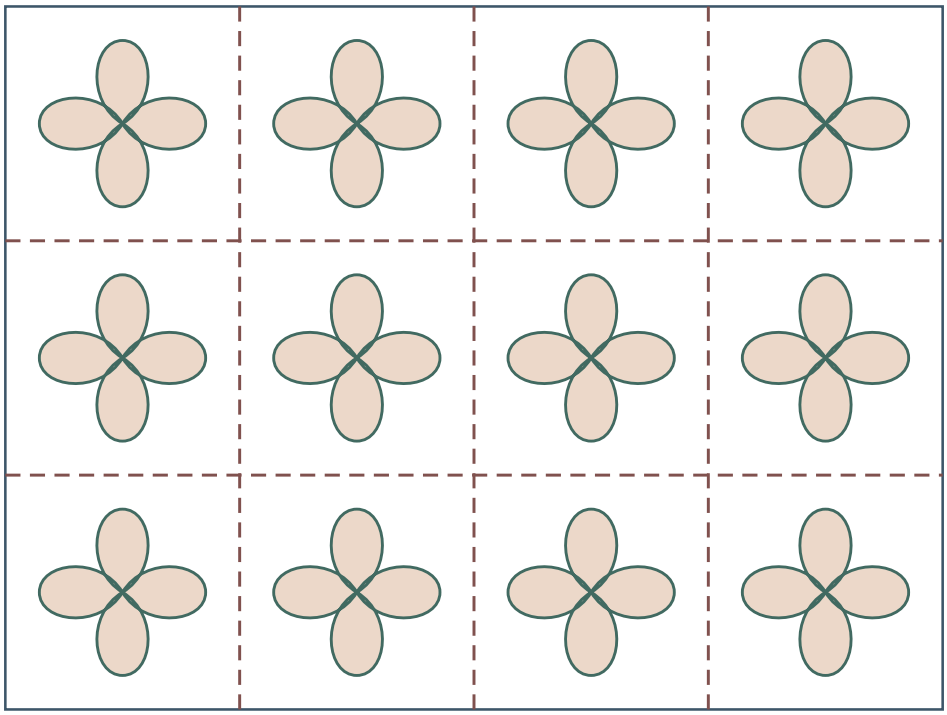


Patterned Paper

Reference I Worked layout I LETTER

Original prompt

Build a printable patterned paper sheet with a small four-petal flower motif in a straight repeat across three rows and four columns, with equal spacing and aligned rows.



Answer

The completed sheet shows the same four-petal flower in every cell of a three-row, four-column layout. Spacing between motifs is equal along each row, and each row aligns with the row above, so the sheet reads as continuous decorative paper. The grid is a light construction guide only.

Reasoning

Using one motif and a regular grid makes the repeat predictable. Equal spacing and aligned rows are what turn a single drawing into patterned paper.

Check

Look along each row for even spacing and down each column for alignment; then imagine the sheet tiled beside a copy to confirm the edge spacing matches the interior spacing.
