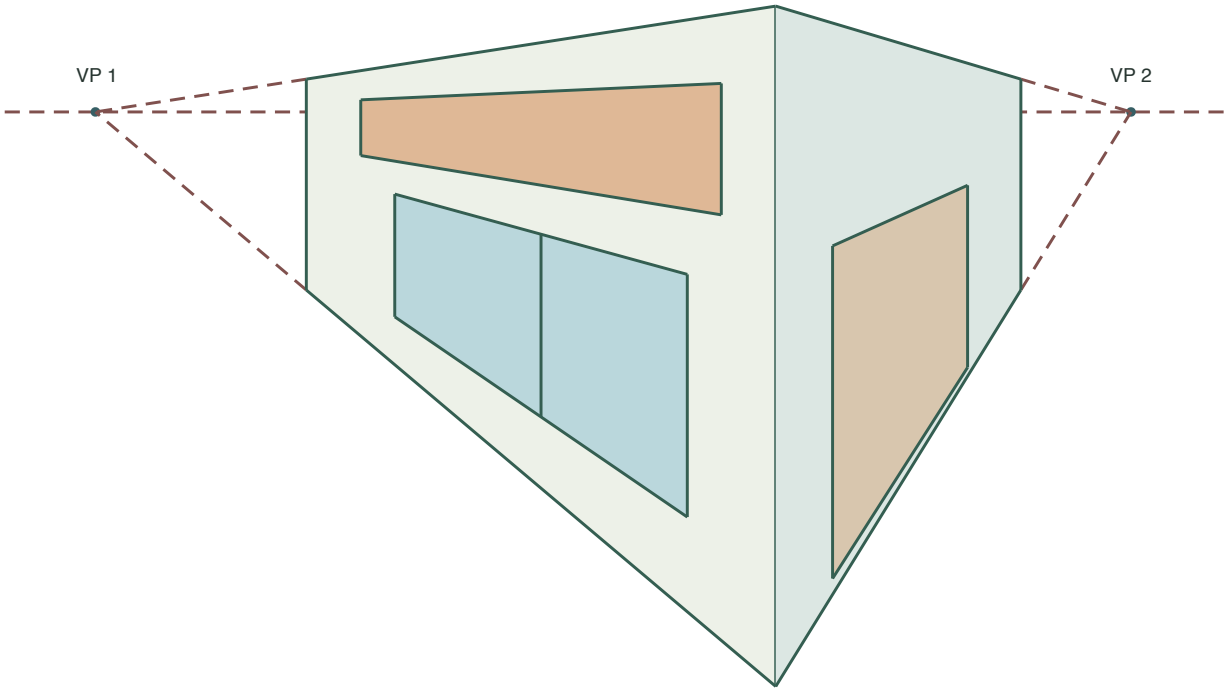
Draw a Store in Perspective

Reference | Corner shop worked example | LETTER

Original prompt

Draw a corner storefront in two-point perspective on a chosen horizon line with two chosen vanishing points, then add a sign band, window, and door using the same construction lines.



The tan band is the sign. The blue panel is the display window. The side-face door follows VP 2.

Answer

A two-point storefront plate: horizon line across the middle, left and right vanishing points marked, nearest vertical edge near center, front-face edges converging left, side-face edges converging right, vertical edges vertical, and sign band, window, and door aligned to the same vanishing lines.

Reasoning

The two-point setup is chosen because the storefront is seen from an angle, so both the front face and one side face recede. Repeating the same vanishing lines for the storefront parts keeps every edge consistent with the mass.

Check

Trace each front-face horizontal edge to the left vanishing point and each side-face horizontal edge to the right vanishing point; confirm all vertical edges remain vertical.
