Budget Planner Pages

Reference / solved example

Record category Supplies, planned amount 40, actual amount 32; calculate planned minus actual.

Answer: Category = Supplies; Planned = 40; Actual = 32; Difference = 8.

Category	Planned	Actual	Difference
Supplies	40	32	8

40 - 32 = 8. A negative difference means actual exceeded planned; these are fictional amounts without financial advice.

Check: Compare every field with the scenario; do not mark an unfinished item done.
