Original prompt

Copy the eye square from the reference into the matching blank square, then check it against the reference.

Reference square D3

Model square D3

Answer

The completed square shows the eye's top curve in the upper middle, a short stripe above it pointing toward the outer corner, and the cheek-fur edge meeting the square's lower edge. This matches the reference square's arrangement.

Reasoning

Drawing the largest shape first (the eye curve) gives a stable anchor, and adding the stripe and fur edge afterward keeps their positions relative to the eye correct.

Check

Place your square beside the reference square. The eye curve, stripe direction and fur-edge meeting point should all line up; if not, redraw the misplaced line.
