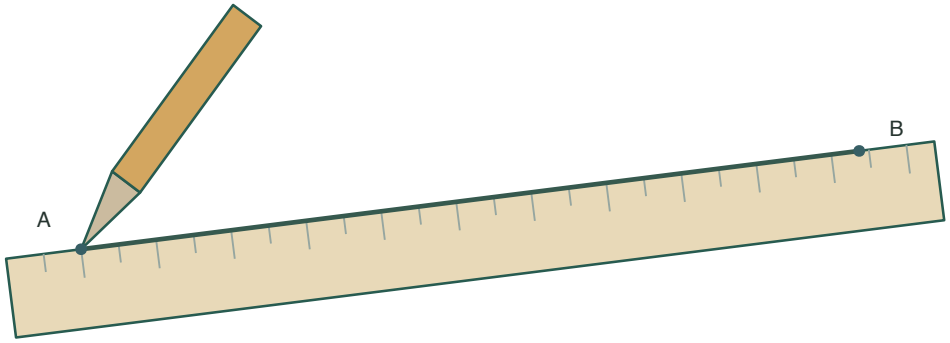
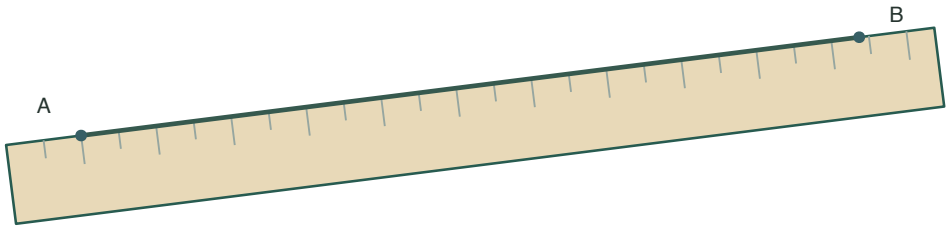
Place the edge and pencil point



Check the line against the edge



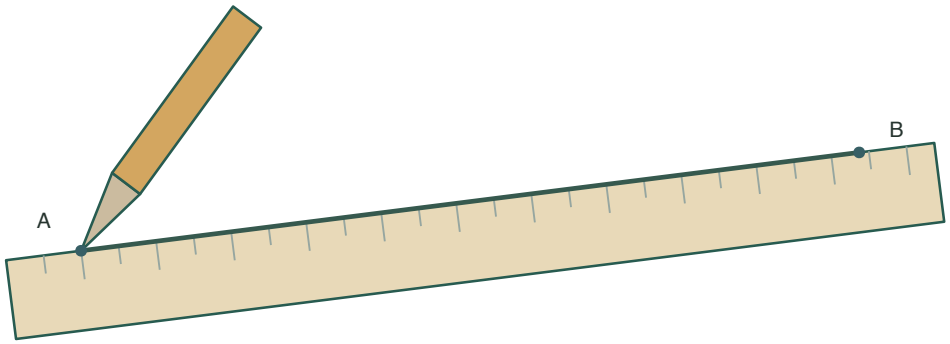
Drawing Straight Lines with a Ruler

Reference | Worked example | A4

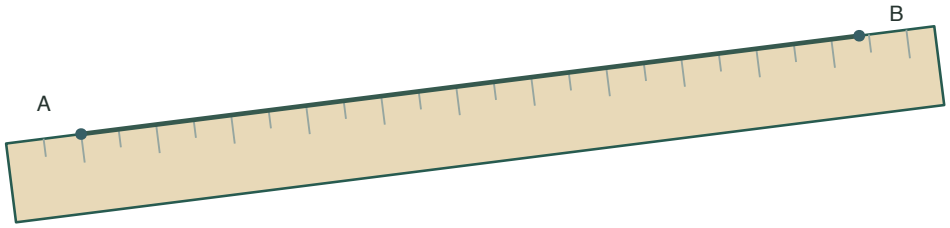
Original prompt

Draw a straight line from dot A to dot B using a ruler.

Place the edge and pencil point



Check the line against the edge



Answer

Place the ruler edge through both dots, hold it steady, draw from A to B along the edge, then check the line is flush with the edge and passes through both dots.

Reasoning

The ruler edge defines the line path; holding it steady prevents wobble; checking against the edge confirms straightness and placement.

Check

Re-lay the ruler edge along the drawn line: no gap, no missed dot, no wobble.
