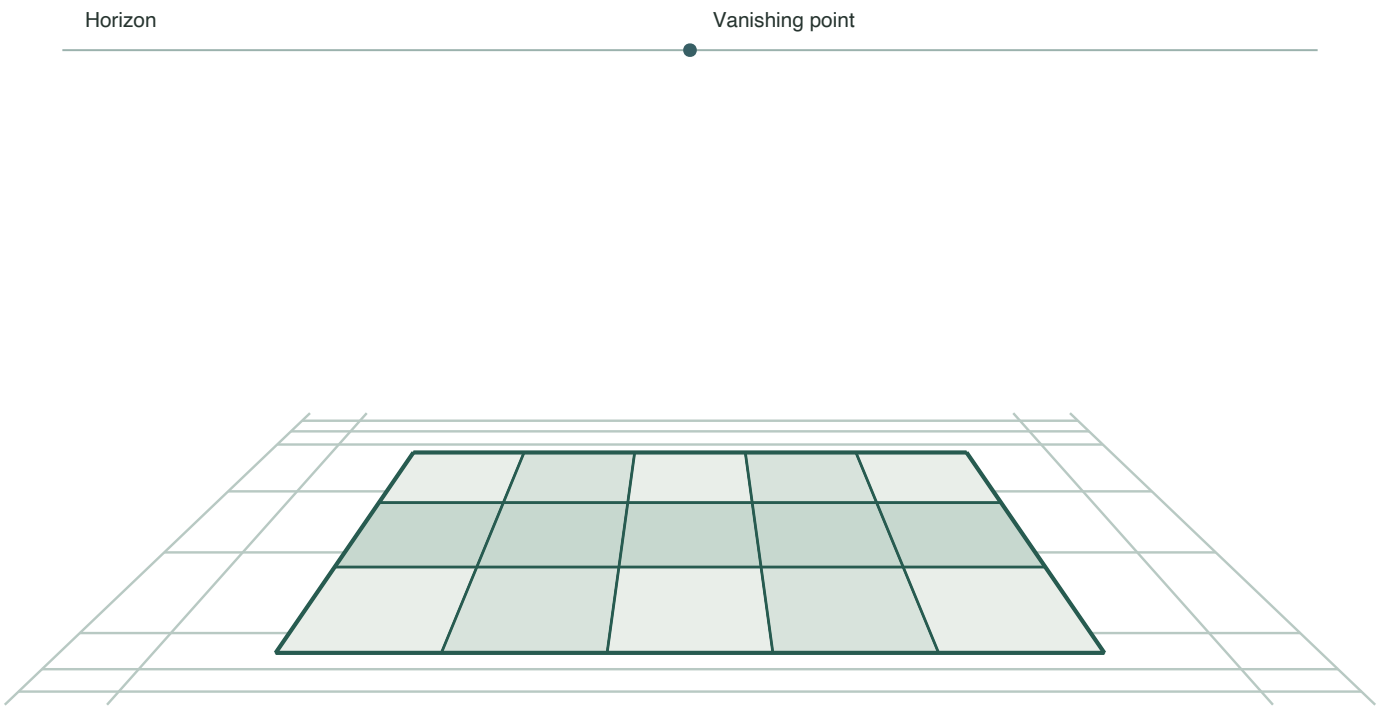
Draw a Rug in One-Point Perspective

Reference | Worked example | A4

Original prompt

Draw a rug in one-point perspective with a rug pattern and floor recession construction, following the six construction steps.



Answer

The worked example shows a horizon line with one vanishing point, two recession lines closed by a front edge and a back edge to form the rug outline, floor recession lines around the rug, and a repeating band-and-square pattern carried across the rug so its depth lines converge to the same vanishing point. The visual check confirms that all depth lines point to the one vanishing point and the front and back edges stay parallel to the picture plane.

Reasoning

The floor recession sets the rug outline, and the pattern is carried across that outline so its depth lines share the same vanishing point; this is what makes the rug read as lying flat on a receding floor.

Check

Use a straight edge to confirm that the rug's side edges, the floor recession lines, and the pattern's depth lines all meet at the single vanishing point, and that the front and back edges stay parallel to the picture plane.
