Draw a Bed in Perspective

Reference | Flat front view | LETTER

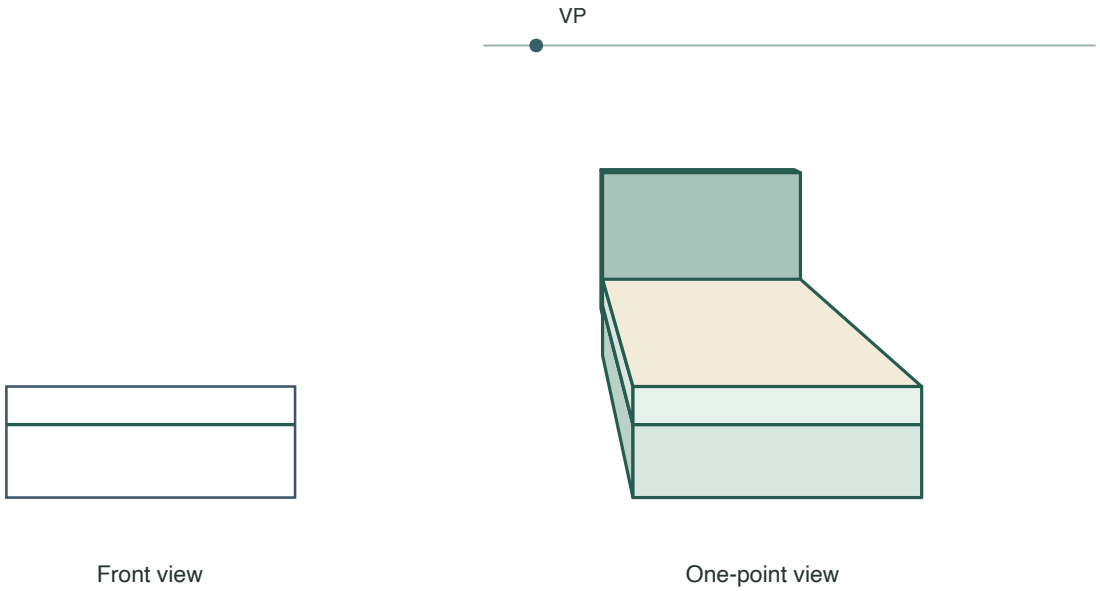
Look straight at the foot end. The mattress line shares the top and bottom direction.

Draw a Bed in Perspective

Reference I Worked example I LETTER

Original prompt

Draw a bed in one-point perspective and compare it with its front view.



Front view

One-point view

Answer

The front view shows a wide rectangle and a horizontal mattress seam. Beside it, the same foot-end shape fronts a receding base and shallow mattress. A taller headboard stands at the rear, face parallel to the foot end. The construction plate shows the four paths to one point and the closed rear section.

Reasoning

The front face stays true because it is parallel to the picture plane; only depth edges converge, so the bed reads as a solid box pushed back.

Check

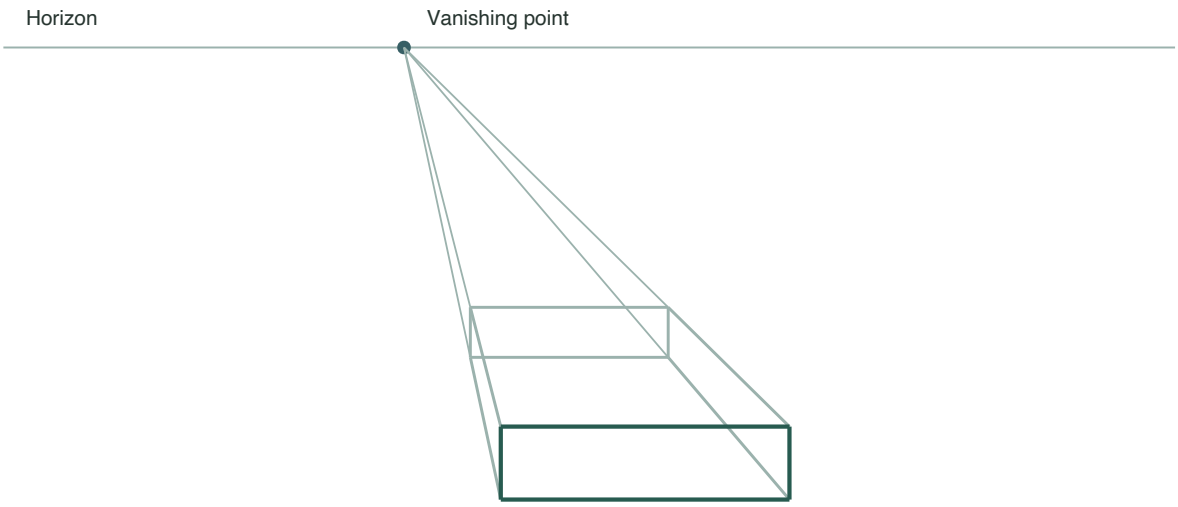
Extend the lengthwise frame and mattress edges to the vanishing point. Compare the two foot-end rectangles and check that the headboard face has level top and bottom edges and upright sides.

Draw a Bed in Perspective

Reference | Four projected corners | LETTER

Original prompt

Draw a bed in one-point perspective and compare it with its front view.



Find a common depth on the four faint rays, then join the rear section. The clean drawing is on the preceding reference page.
