Fall Grid Drawing

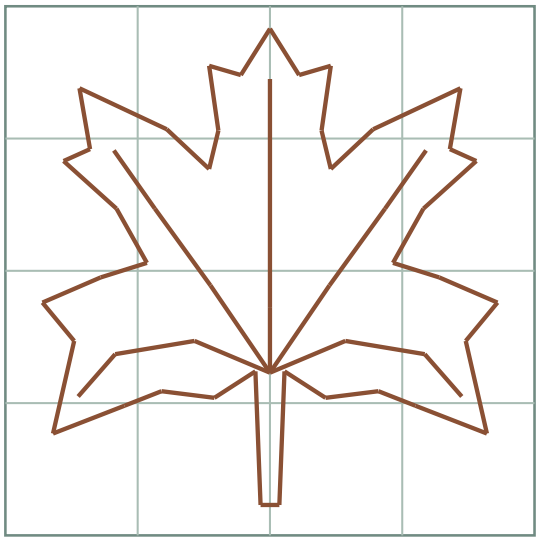
Reference | Worked example | LETTER

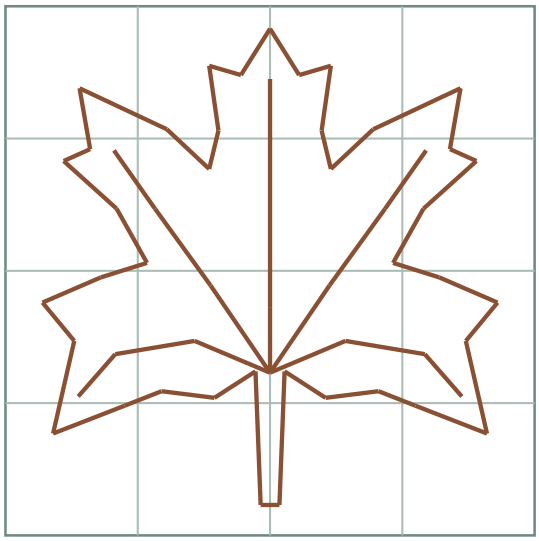
Original prompt

Copy the reference grid of the maple leaf into the blank grid, square by square.

Reference grid



Model copy



Answer

A leaf whose stem runs down the two middle columns and whose points reach the same corner squares as the reference.

Reasoning

Each square is copied in turn, so the stem and points land in the matching squares of the blank grid.

Check

Compare each square of the drawing with the same square of the reference and redraw any square that does not match.
