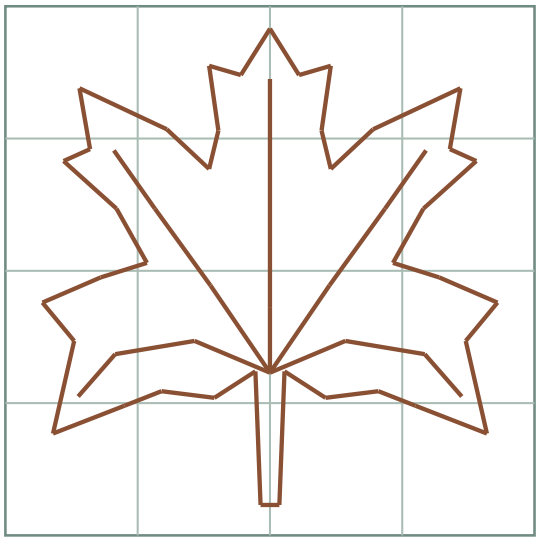
Fall Grid Drawing

Answer | Task 1 of 4 | LETTER

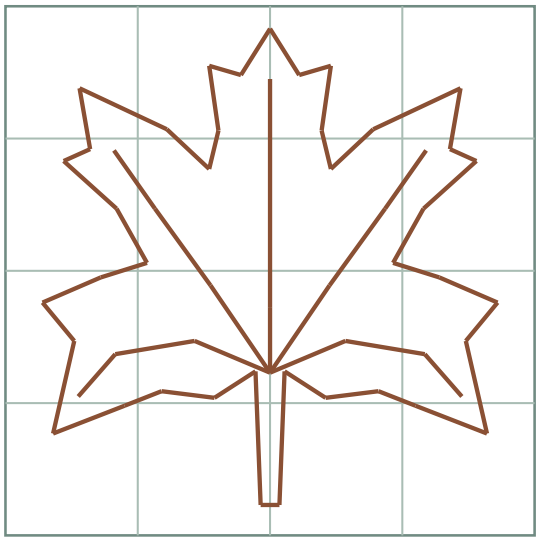
Original prompt

Copy the reference grid of the maple leaf into the blank grid, square by square.

Reference grid



Model copy



Answer

A leaf whose stem runs down the two middle columns and whose points reach the same corner squares as the reference.

Reasoning

Copying one square at a time places each part of the leaf in the matching square.

Check

Compare each square with the reference and correct any mismatch.

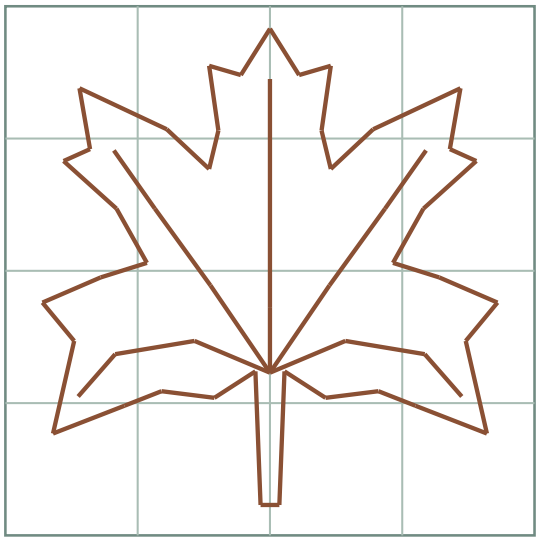
Fall Grid Drawing

Answer | Task 2 of 4 | LETTER

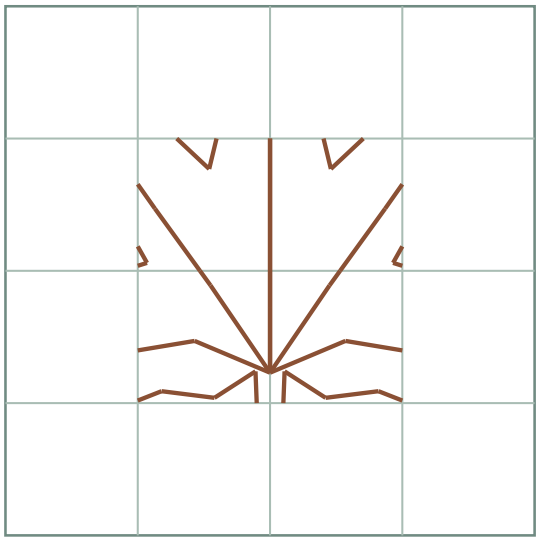
Original prompt

Copy only the four centre squares of the maple leaf reference into the matching centre squares of the blank grid.

Reference grid



Model copy



Answer

Copy the stem and leaf-body fragments inside rows 2–3 and columns 2–3. Leave all other squares blank, including those containing the outer tips.

Reasoning

Restricting the copy to the centre squares isolates the leaf body and stem from the outer points.

Check

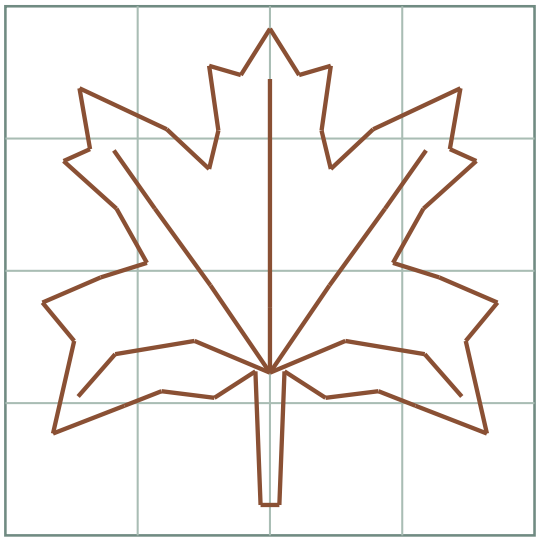
Confirm each centre square matches the reference and that no outer-square content has leaked in.

Fall Grid Drawing

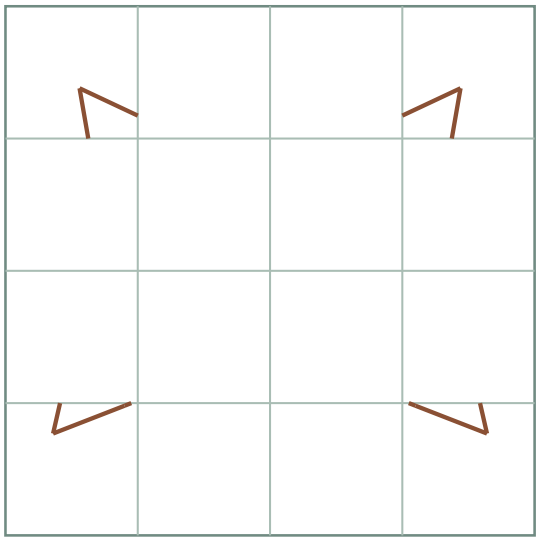
Original prompt

Copy only the four corner squares of the maple leaf reference into the matching corner squares of the blank grid.

Reference grid



Model copy



Answer

The leaf points that fall inside those corner squares, with the centre left empty.

Reasoning

Cropping each tip at the borders of its corner square lets you practice local placement without drawing the centre of the leaf.

Check

Compare each corner square with the reference and confirm the centre squares stay blank.

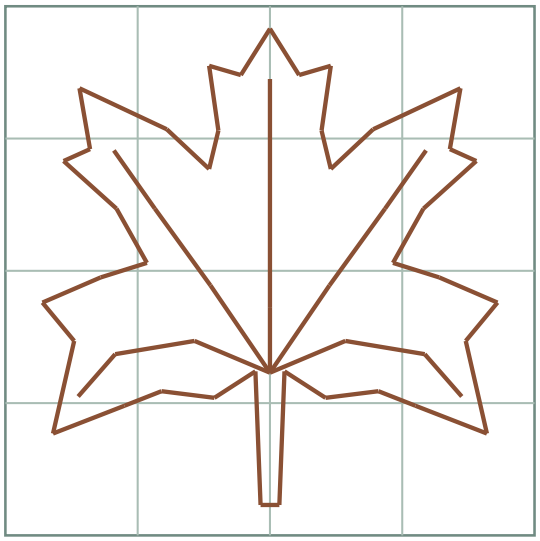
Fall Grid Drawing

Answer | Task 4 of 4 | LETTER

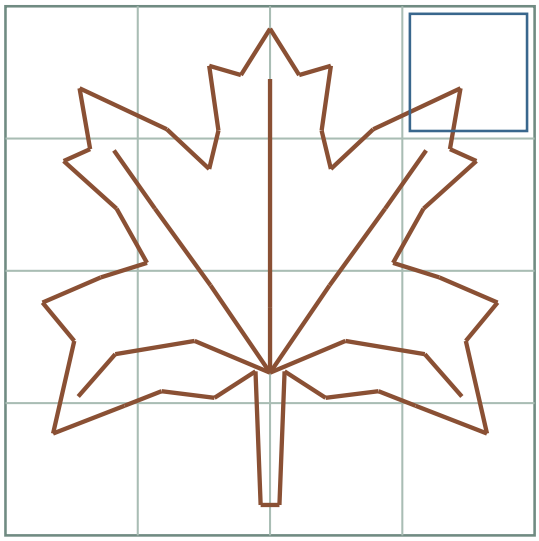
Original prompt

Copy the full maple leaf reference into the blank grid, then mark any square you had to redraw.

Reference grid



Model copy



Example redraw marked in blue: row 1, column 4.

Answer

A complete leaf matching the reference, plus a short note of which squares were corrected.

Reasoning

Copying the whole leaf and recording corrections shows where the square-by-square check caught errors.

Check

Verify each square against the reference and confirm the redrawn squares now match.
