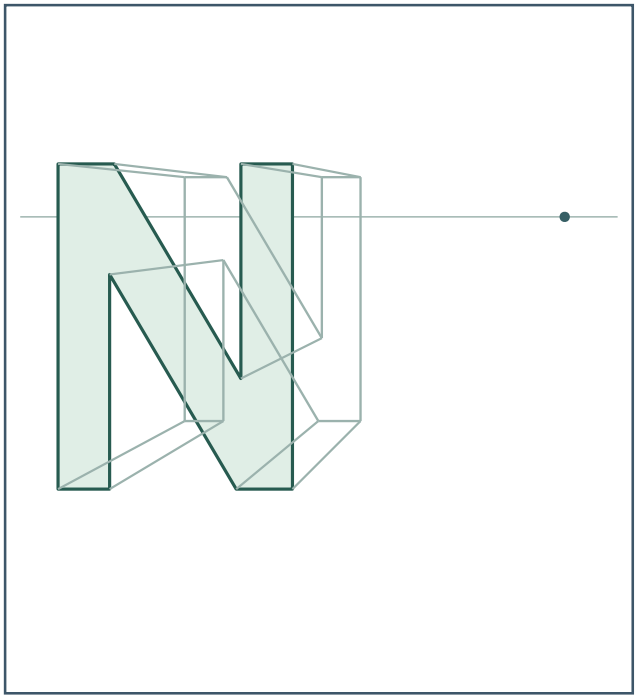
Draw Letter N in One-Point Perspective

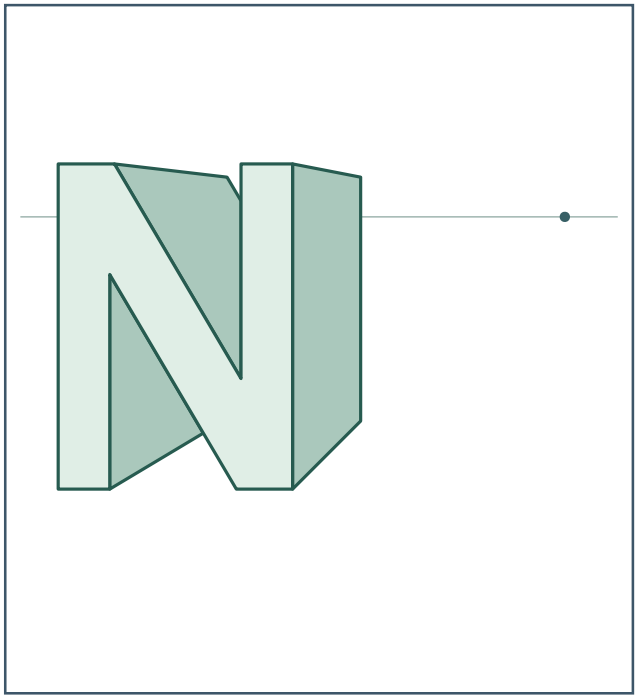
Reference | Worked example | A4

Original prompt

Draw the capital letter N in one-point perspective with the vanishing point to the right of the letter.



Smaller rear outline



Visible surfaces

Answer

A flat front N is drawn, light lines run from each corner to the vanishing point on the right, a smaller parallel back N is placed along those lines, and the receding edges connect front to back. All depth edges converge on the chosen point.

Reasoning

The front face stays flat and true; the back face is a shifted, smaller copy; the connecting edges all aim at one vanishing point, which is what makes the letter read as solid in one-point perspective.

Check

Trace each receding edge back: it should pass through the vanishing point. The back face should be parallel to the front and smaller.
