One-Point Perspective Park

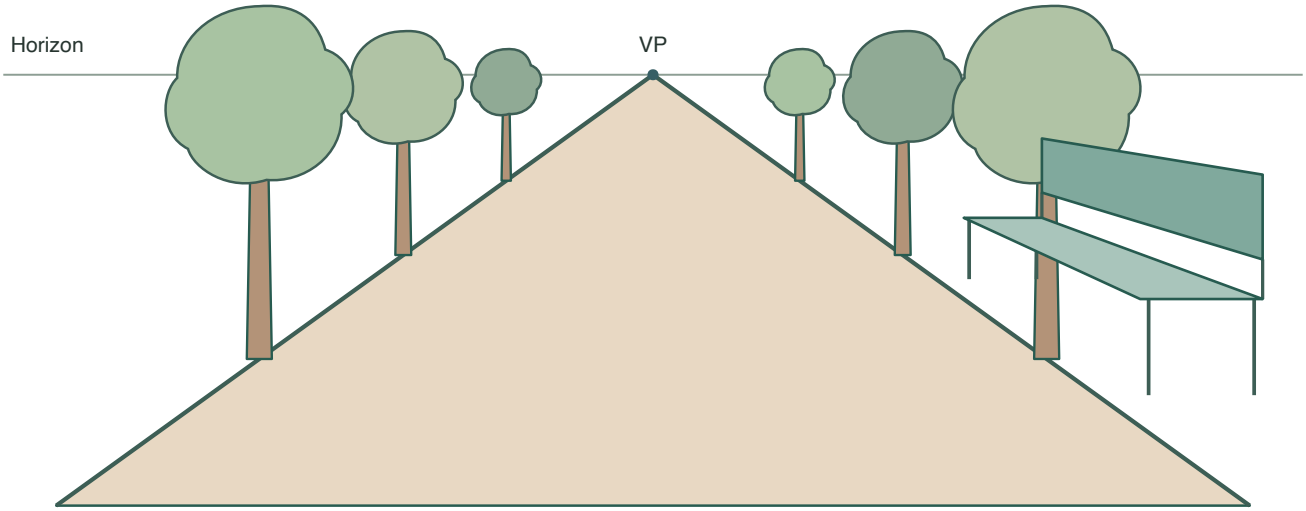
Reference I Worked example I LETTER

Original prompt

Worked example: a park path with a bench, built step by step.



Answer

Mark a horizon and a vanishing point. Draw the two path edges toward it from the lower corners of the drawing panel. Place tree rows with tops and bases along two matching guides per side. Put the bench beside the path and point its lengthwise seat and back edges toward the same point. The bench's near end is larger on the page.

Reasoning

The order matters: the horizon and vanishing point fix all convergence, the path sets the ground direction, the tree rows confirm the same convergence, and the bench is placed last so its scale and orientation can be matched to the established lines.

Check

Extend the two path edges, the tree-row base and top alignments, and the lengthwise seat/back edges. They share the marked point. Compare matching widths of the two bench ends; the near end should appear larger.
