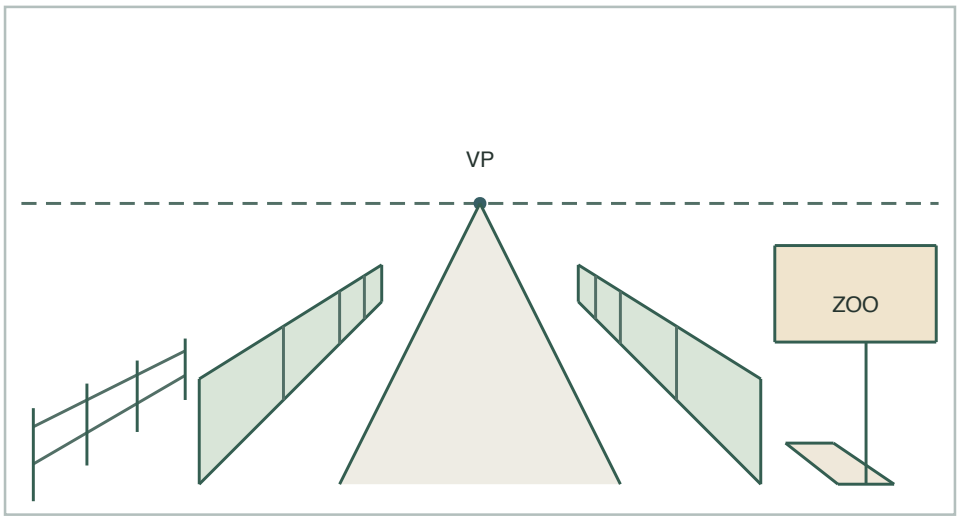
Draw Zoo Space in One-Point Perspective

Reference | Worked construction | LETTER

Original prompt

Draw a zoo scene in one-point perspective with a horizon line, a single VP, a path converging to it, and two enclosures built from front edges and depth lines.

Worked zoo scene



Answer

Horizon line with centered VP; path as two converging lines; left and right enclosures each with a vertical front edge, two depth lines to the VP, and a shorter vertical back edge; a fence and a sign with depth edges aimed at the VP.

Reasoning

All depth edges share one VP, so the scene reads as receding consistently; back edges are shorter because they are farther from the viewer.

Check

Trace each depth edge; it should pass through the VP. Confirm each back edge is vertical and shorter than its front edge.
