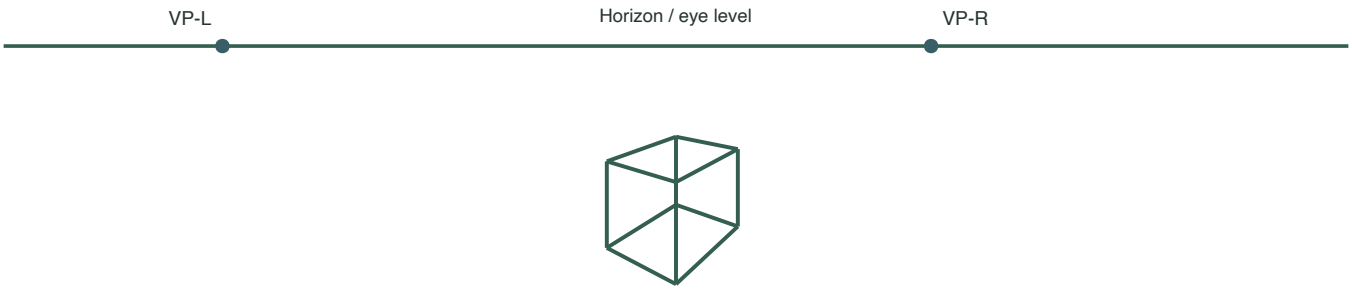
Horizon Line in Perspective Drawing

Reference I Worked example I LETTER

Worked prompt

Draw a corner-view box with the viewer's eye above it, showing the horizon line and two vanishing points on it.



Answer

A horizontal horizon line at the chosen eye height, a left and a right vanishing point on it, a nearest vertical edge, and level top and bottom edges converging to the two points, closed by verticals.

Reasoning

The horizon records eye level; level receding edges converge to vanishing points that must sit on that horizon.

Check

Confirm both vanishing points lie on the horizon line and the level edges converge toward them.
