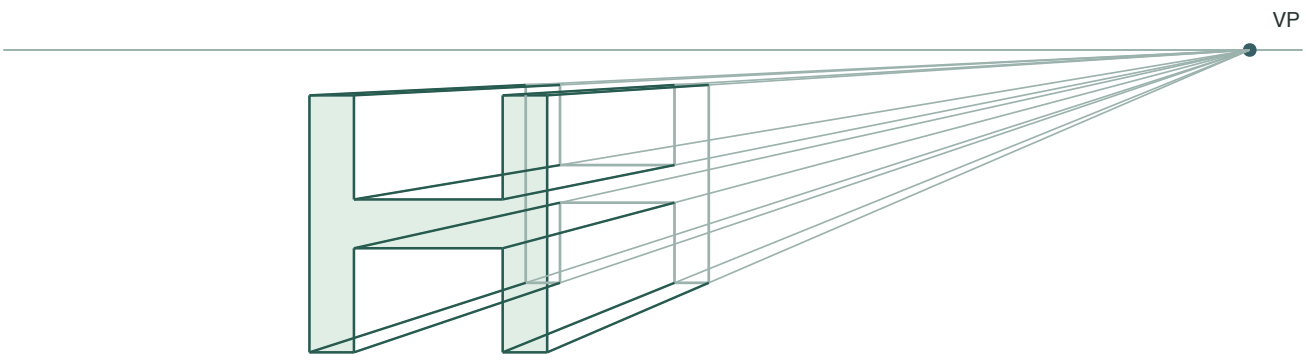
# Draw One-Point Perspective Typography

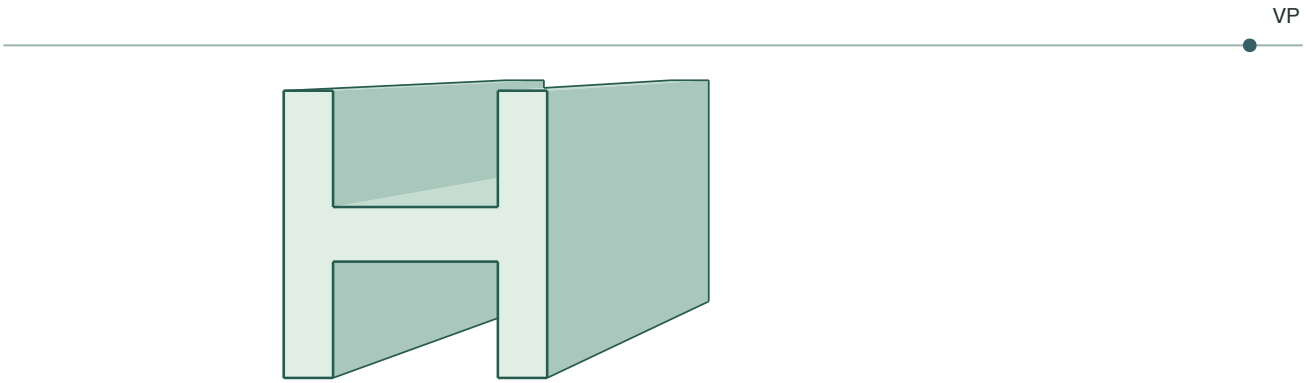
Reference I Worked example I LETTER

## Original prompt

Worked example: extrude a block letter H in one-point perspective.



Construction and smaller rear



Clean visible surfaces

## Answer

Draw the horizon and vanishing point. Draw a flat block H front face. From each outer corner, draw a light line to the vanishing point. Mark a back corner on each line, nearer the vanishing point, and connect them into a smaller H. Join matching front and back corners with straight side edges. The result is a solid H whose depth recedes to one point.

## Reasoning

The front face keeps the letter readable, the sight lines fix the direction of depth, and the smaller back face plus side walls create the solid. Matching corners one-to-one prevents twisted or crossed walls.

## Check

Trace each receding edge back: it should pass through the vanishing point. Confirm the back H is smaller and centred along the same sight lines as the front H.
