

Hatching: Add crossed layers

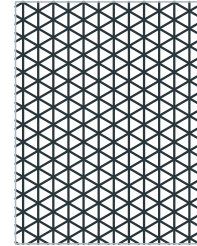

Compare the examples above, then use the lower panels for your attempt. Keep line width consistent when comparing spacing. The answer gives one reference completion, not a required stroke-for-stroke drawing.

1 line families

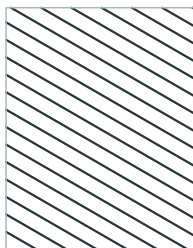

2 line families

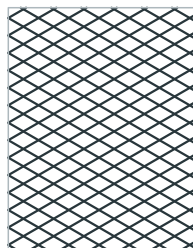

3 line families

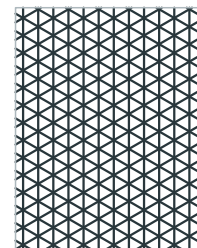

Practice: change spacing or layer count deliberately. For curves, follow the form. For each cube, use fewer lines on the declared lit face and more on the dark side.

1 line families

2 line families

3 line families

Self-check: consistent stroke width; readable gaps; controlled directions; a clear change in value. Printed samples use 0.3 mm lines.
