

Hatching: Simple forms with line

Compare the examples above, then use the lower panels for your attempt. Keep line width consistent when comparing spacing. The answer gives one reference completion, not a required stroke-for-stroke drawing.

Left lit

Right lit

Practice: change spacing or layer count deliberately. For curves, follow the form. For each cube, use fewer lines on the declared lit face and more on the dark side.

Right lit

Self-check: consistent stroke width; readable gaps; controlled directions; a clear change in value. Printed samples use 0.3 mm lines.
