

Made-up daily rainfall

Fictional time-series observations. Connect points in increasing time order. Segments are a display convention, not proof of values between observations.

Day: 1, 2, 3, 4, 5, 6 / Rainfall (mm): 1, 3, 0, 2, 4, 2

1. Highest observed value and all matching times? 4 mm, at 5.
2. Net change: last value minus first? $2 - 1 = 1$ mm.
3. Largest rise between consecutive observations? 2 mm: 1 to 2, 3 to 4, 4 to 5.

Original practice data / coordinate units, not ruler measurements / physical printing not tested
