

A fictional set of art cards

Fictional parts of one whole. Sector angle = $\text{count} / \text{total} \times 360$ degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Lines=4, B Forms=6, C Color=7, D Space=3

1. Find the total count. Compare the completed plot.
2. Calculate each percentage and sector angle. Compare the completed plot.
3. Check the two whole-chart totals. Compare the completed plot.

Original practice data / coordinate units, not ruler measurements / physical printing not tested

An imaginary tray of tokens

Fictional parts of one whole. Sector angle = $\text{count} / \text{total} \times 360$ degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Moss=3, B Clay=6, C Slate=6, D Sand=9

1. Find the total count. Compare the completed plot.
2. Calculate each percentage and sector angle. Compare the completed plot.
3. Check the two whole-chart totals. Compare the completed plot.

Original practice data / coordinate units, not ruler measurements / physical printing not tested

A made-up club activity split

Fictional parts of one whole. Sector angle = $\text{count} / \text{total} \times 360$ degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Sketch=6, B Build=3, C Read=3

1. Find the total count. Compare the completed plot.
2. Calculate each percentage and sector angle. Compare the completed plot.
3. Check the two whole-chart totals. Compare the completed plot.

Original practice data / coordinate units, not ruler measurements / physical printing not tested

Fictional mosaic tiles

Fictional parts of one whole. Sector angle = count / total x 360 degrees. The supplied completion begins on the right and goes counterclockwise.

Counts: A Moss=3, B Clay=4, C Slate=5, D Sand=6, E Ink=2

1. Find the total count. Compare the completed plot.
2. Calculate each percentage and sector angle. Compare the completed plot.
3. Check the two whole-chart totals. Compare the completed plot.

Original practice data / coordinate units, not ruler measurements / physical printing not tested
