

All four quadrants

Plot every ordered pair once. Read x first along the horizontal axis and y second along the vertical axis.

Points: $[-4, 3]$, $[-2, -1]$, $[1, 4]$, $[3, -2]$, $[-5, -3]$, $[4, 1]$, $[0, -4]$, $[2, 0]$

1. How many pairs? 8 ordered pairs.
2. List the first three points. $[-4, 3]$, $[-2, -1]$, $[1, 4]$ are the first three.
3. What sign or axis check prevents a swap? Keep axis points on the axis and preserve x before y.
