

## Signs and axes

Plot every ordered pair once. Read x first along the horizontal axis and y second along the vertical axis.

Points:  $[-3, 0]$ ,  $[0, 3]$ ,  $[3, 0]$ ,  $[0, -3]$ ,  $[-2, 2]$ ,  $[2, -2]$ ,  $[-4, 4]$ ,  $[4, -4]$

1. How many pairs? \_\_\_\_\_
2. List the first three points. \_\_\_\_\_
3. What sign or axis check prevents a swap? \_\_\_\_\_

Original practice data / coordinate units, not ruler measurements / physical printing not tested
