

A point trail

Plot every ordered pair once. Read x first along the horizontal axis and y second along the vertical axis.

Points: $[-5, 2]$, $[-3, 4]$, $[-1, 1]$, $[1, -2]$, $[3, -4]$, $[5, -1]$, $[2, 3]$, $[-2, -3]$

1. How many pairs? 8 ordered pairs.
2. List the first three points. $[-5, 2]$, $[-3, 4]$, $[-1, 1]$ are the first three.
3. What sign or axis check prevents a swap? Keep axis points on the axis and preserve x before y .
