Script Handwriting Practice Sheets with Guide Lines: Planning Guide

Worked example / complete source key

Plan a short script practice row for the lowercase letter a using a baseline and a top line set 1 cm apart. Include one model, one tracing repetition, and one blank guide-line space.

Answer: Set the baseline and top line 1 cm apart. In the model column, place one lowercase a that sits on the baseline and rises to about half the top-line height. In the tracing row, repeat the same a lightly so the writer can follow the stroke path. In the blank guide-line space, leave the baseline and top line visible but no model, so the writer produces the letter independently. Judge the result with the rubric, not an exact match.

Reason: The 1 cm spacing is a hypothetical example input, not a universal requirement. The row separates observation, tracing, and independent writing while keeping the same guide-line positions.

Check: Measure the baseline-to-top-line distance on your own output and confirm it matches your intended spacing. Then check the written letter against the rubric for baseline contact, height, and legibility.
