Chosen reference / grid notes

Chosen 10-row example: 80 mm grid + 20 mm side notes.

Eight 10 mm columns give 80 mm; 20 mm side notes give 100 mm total width. Ten rows are chosen.

Genkō Yōshi Grid Sheets: Character Boxes, Margin Notes, and Furigana Planning

Original worked example / unchanged complete key

Prompt: Plan a genkō yōshi sheet with 8 columns of 10 mm character boxes and a 20 mm notes column beside the grid. What is the total width?

Answer: The character area is 8 × 10 = 80 mm wide. Because the notes column is beside the grid, add its width: 80 + 20 = 100 mm total width. If the notes column were below the grid instead, the width would stay 80 mm and the notes column would add height. These are hypothetical example inputs; measure your actual paper and printer before finalizing.
