Triple-Lined Paper: Top, Middle and Base Guide Lines Explained

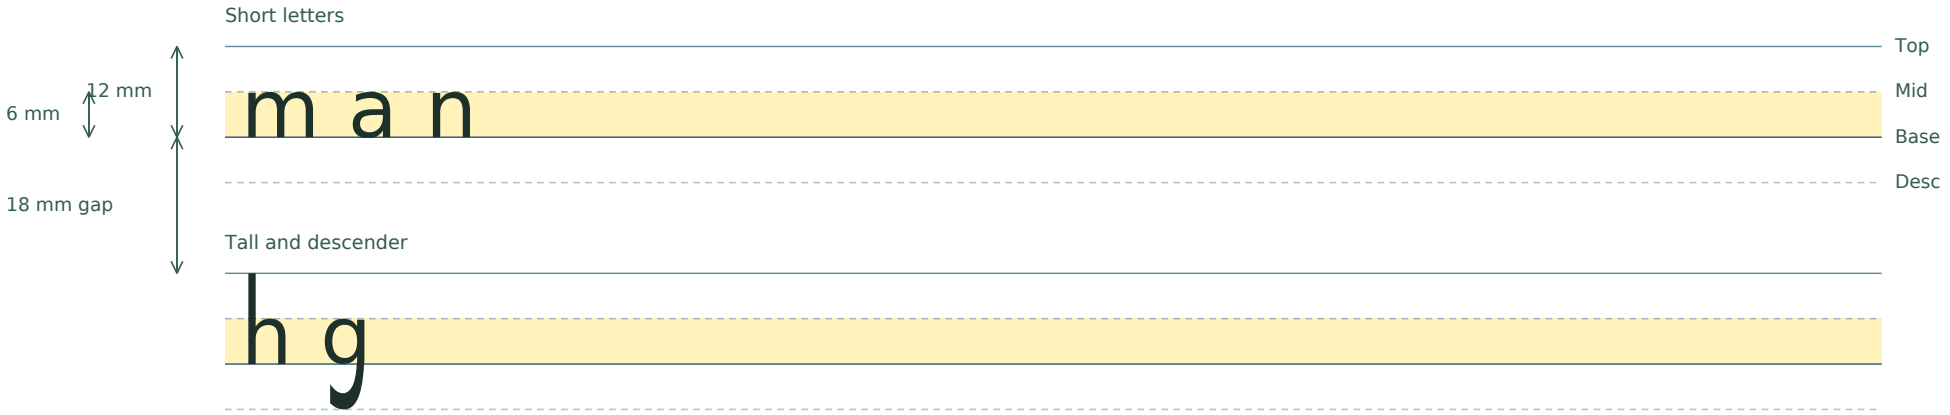

Original worked example / unchanged complete key

Prompt: A row has its base line at 0 mm and the next base line 18 mm below. A writer places a short letter m, a tall letter h and a descender letter g. Describe where each should sit and note one style caveat.

Answer: The m should touch the base line at 0 mm and stay below the dashed middle line. The h should touch the base line and its stem should reach the top line. The g should keep its body in the x-height zone and its tail should cross the base line into the space between 0 mm and the next base line at 18 mm. Letter shape and style may vary; zone placement is the criterion. The 18 mm value is a hypothetical example input, not a universal requirement.

Triple-Lined Paper: Top, Middle and Base Guide Lines Explained

Triple-ruled guide: base, dashed middle, top and descender space

Chosen layout example: base line to top 12 mm, base to dashed middle 6 mm, descender space 6 mm, next baseline 18 mm below. Not a handwriting standard.
