Alphabet Lined Paper: Model Row and Ruled Practice

Worked example / complete source key

On a print model row, classify a, b, c, g, and t by height relative to baseline, midline, and top line.

Answer: Print a and c are body-only: they sit between baseline and midline. Print b is an ascender: it reaches toward the top line. Print g is a descender: it extends below the baseline. For print t, check the model row; do not assume it reaches the top line or that its crossbar sits at the midline.
