Korean Syllable-Block Writing Grid with Stroke Guides

Original tasks 1, 2 / independent work

Task 1

A practice square is 20 mm wide and the gap between squares is 2 mm. A learner writes five blocks in a row. Calculate the total width of the five squares plus the four gaps between them. State the units.

Task 2

A learner traces one block, writes three faded blocks, and then writes six freehand blocks. The session plan calls for two guided, three faded, and five freehand blocks. Describe the difference between what the learner did and the plan, and state one adjustment.

Korean Syllable-Block Writing Grid with Stroke Guides

Original tasks 3, 4 / independent work

Task 3

A page has four blocks. Block 1 is fully inside its square. Block 2 extends 1 mm past the right edge. Block 3 is fully inside. Block 4 touches block 3 with no gap. Using the rubric, name the two criteria that are not fully met and explain why.

Task 4

A learner completes a row of five freehand blocks in 80 seconds. In the next session the same learner completes the row in 75 seconds with the same rubric score. Calculate the time reduction and state whether the accuracy was maintained according to the given information.
