Korean Syllable-Block Writing Grid with Stroke Guides

Worked example / complete source key

A learner traces one block with the guide visible, writes two faded blocks, then writes five freehand blocks in 70 seconds. The square is measured at 18 mm wide and the gap at 2 mm. The learner circles one stroke that differs from the guide. Describe how to score this page with the rubric and what to practice next.

Answer: Score legibility first: all five freehand blocks are readable and sit inside their squares, so legibility is strong. Check relative placement: the jamo are in the correct left-right or top-bottom positions, so placement is strong. Check stroke consistency: four blocks show the same direction for the circled stroke, but one block reverses it, so consistency is partial. The measured square is 18 mm and the gap is 2 mm, which is consistent across the row. The row time of 70 seconds is recorded as a baseline, not a pass or fail. Next session, practice only the circled stroke five times with a faded guide, then write one freehand row and compare consistency.
