# Circle-Grid Handwriting Sheet: Round Letter Formation Practice

Original tasks 1, 2 / independent work

## Task 1

A circle cell has a diameter of 12 mm. A learner draws an a whose round body fits inside the circle, but the body touches the circle boundary at two points. The letter is legible. Does the body-inside check pass?

## Task 2

A learner draws a d in a circle cell. The round body is inside the circle, but the stem goes downward below the circle. The letter looks like a q. Which check fails and why?

# Circle-Grid Handwriting Sheet: Round Letter Formation Practice

Original tasks 3, 4 / independent work

## Task 3

A circle cell is 10 mm in diameter. A learner draws a g with the round body inside the circle and a descender that extends 4 mm below the circle into the tail space. The letter is legible. Does this pass the three-part check?

## Task 4

A learner draws an o that starts at the upper-left of the circle and curves around, but the body is slightly oval and extends 1 mm beyond the circle on the right side. The letter is legible. Using the rubric, what should be recorded?
