Circle-Grid Handwriting Sheet: Round Letter Formation Practice

Worked example / complete source key

A learner practices the letter o in a circle cell with a diameter of 10 mm. The model shows a start dot at the top of the circle and a continuous curve that returns to the start. The learner draws an o that stays inside the circle but starts at the bottom. Using the three-part check, is this acceptable?

Answer: Yes, it is acceptable if the body stays inside the circle, the letter is legible, and no stem is required. The starting point differs from the model, but the convention allows valid style variation. The check passes on body placement and legibility; stem direction is not applicable for o.
