Graph-Paper Alphabet Lettering Sheet: Height and Spacing Guides

Worked example / complete source key

A learner plans a row for the letter o on a hypothetical five-millimeter grid. The baseline is at square 0, the midline is at square 2, and the top line is at square 4. The model o sits between the baseline and the midline. The learner copies four o letters with a three-square gap between each pair. Check the height zone and the gap count.

Answer: Each o should sit between square 0 and square 2, so its height is two squares. The gap between each pair should be three squares. If a copied o rises above square 2 or the gap is not three squares, rewrite that letter or adjust the spacing. The style of the o may be rounded or oval as long as the zone and gap count are correct.
