Feint Lined Graph Paper: Hybrid Ruling for Neat Handwriting and Alignment

Printable hybrid feint-lined graph paper practice sheet

Hybrid ruling: light feint lines over a faint square grid. x-height is baseline to midline. Letter styles vary; use the grid for spacing and margins, not as a strict box. All numbers hypothetical; mea

Feint Lined Graph Paper: Hybrid Ruling for Neat Handwriting and Alignment

Original tasks 1, 2, 3 / blank responses

Task 1

On a hypothetical sheet with 8 mm feint lines and 4 mm grid squares, a writer keeps the baseline on a feint line. They want the x-height zone to span two grid squares vertically. What is the x-height in millimeters, and what is one check?

Task 2

A line has five words. The gaps in grid squares are 2, 2, 3, and 2. Using the convention, state whether the gaps are consistent enough and give one adjustment for the next line.

Task 3

A writer wants a left margin of three grid squares and a right margin of three grid squares on a hypothetical sheet. They count four squares on the left and two on the right. What is the difference, and what is one correction?

Feint Lined Graph Paper: Hybrid Ruling for Neat Handwriting and Alignment

Original tasks 4 / blank responses

Task 4

A writer uses a style with tall ascenders that extend two grid squares above the midline. The baseline is on a feint line and the midline is 8 mm above it. If each grid square is 4 mm, how far above the baseline can the ascender reach in this hypothetical example?
