Graph Paper and Pencil Writing: Letter Placement Drills

Worked example / complete source key

On a graph row with baseline at the bottom line and midline at the middle line, write the lowercase letters a, c, and e. Use one square between letters. Check the baseline and midline after each letter.

Answer: Place a starting at the baseline, keep its body between baseline and midline, leave one square, place c with its body touching the baseline and reaching the midline, leave one square, and place e with the same body height. All three letter bodies touch the baseline and reach the midline, and the gaps are about one square each.
