Reference / model

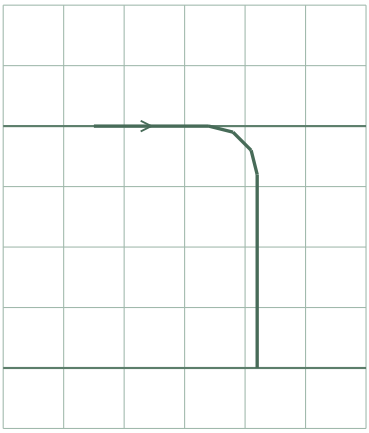

Chosen worksheet construction / one grid cell = 8 mm

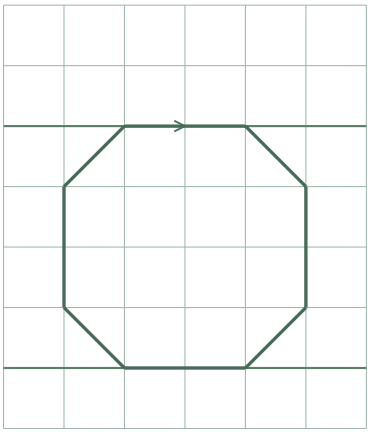

Vav / one downward stroke / height 3 units

Dalet / 3-unit bar with visible right extension

Resh / softened corner / no extra extension

Samekh / given closed octagonal grid approximation

Read Hebrew words right to left. These individual construction paths follow this lesson's chosen pen sequence, not a universal script rule.

Hebrew Block Letters on Graph Paper: Grid Construction and Stroke Guides

Original worked example / unchanged complete key

Prompt: On a one-unit grid, draw dalet (ד) in a four-unit practice box using a straight top bar followed by a downward side stroke near its right end. Preserve the distinguishing upper-right extension and give one check.

Answer: Draw the top bar left to right, then the downward side stroke near its right end, leaving the small upper-right extension visible. Keep the main body within the four-unit box. Check that the two strokes meet cleanly and that the upper-right extension distinguishes the form from resh.
