DIY Calligraphy Grid Paper for Japanese Characters: Square Cells with Center Cross Guides

Worked example / complete source key

A sheet has a usable grid width of 180 mm and a usable grid height of 240 mm. You choose 30 mm square cells with no gap between rows. How many cells per row and how many rows can you plan?

Answer: Six cells per row and eight rows. Width: 180 divided by 30 equals 6. Height: 240 divided by 30 equals 8. The total planned cells are 6 times 8, which equals 48.
