Arrow-Stroke Tracing Worksheet: Build Directional Control

Worked example / complete source key

A guided cell shows a start dot at the top, a vertical guide line downward, and an arrowhead at the bottom. The learner places the pencil on the dot, moves down, and lifts at the arrowhead. The blank row below has the same cell count. Score the guided stroke using the four rubric qualities.

Answer: Start-dot contact: yes. Arrow-direction compliance: yes, travel is downward. Continuity: yes, one continuous movement. Path match: yes, within the stated margin. The stroke passes all four qualities, and the blank-row copy is compared using the same four checks.
