Cursive Practice Lines: Upper, Lower, and Sentence Copying

Worked example / complete source key

On a row with a hypothetical 6 mm x-height, a learner writes lowercase a five times. Four letters touch the baseline and reach the midline; one letter stops 2 mm above the baseline. What is the check result and one correction?

Answer: Four of five letters meet the x-height convention. The fifth is 2 mm short of the baseline. Correction: rewrite that letter slowly, starting on the baseline and lifting the body to the midline.
