Halloween Uppercase–Lowercase Letter Matching: Three Planned Worksheets

Worked example / complete source key

A planned sheet shows uppercase letters B, H, and R in the left column and lowercase letters r, b, and h in the right column. Match each uppercase letter to its lowercase partner and explain the check.

Answer: B matches b, H matches h, and R matches r. Check by saying each letter name aloud and comparing the pair to the answer key, which lists B–b, H–h, R–r.

Reason: The matching is by letter name, not by shape similarity. B and b share the name B; H and h share the name H; R and r share the name R. The shuffled order in the right column does not change the pairs.

Check: After matching, point to each pair and say the letter name. Then compare the three pairs to the answer key. If all three names match, the task is correct.
