Hidden Words Worksheet: Handwriting Practice with Letter-Finding Clues

Worked example / complete source key

A grid has the word STAR placed across row 3, columns 2 to 5. Clue 1 says: 'A four-letter word for a bright object in the night sky; it begins with the nineteenth letter of the alphabet.' Solve the clue, locate the word, and describe how to copy it onto handwriting lines using the baseline-to-midline convention.

Answer: The nineteenth letter is S, so the word is STAR. In the grid, STAR runs across row 3 from column 2 to column 5. On the handwriting lines, write S as a tall letter rising above the midline, T as a tall letter, A as a small letter between baseline and midline, and R as a small letter. Keep the x-height consistent for A and R. Check spelling against the grid and confirm that the chosen letter style is applied consistently.
