Handwriting Pangram Practice: Copy Lines for Every Letter

Worked example / complete source key

Copy the pangram 'Pack my box with five dozen liquor jugs.' onto a blank line, then check it using the letter-by-letter routine. Describe what you would fix if the descending letters j and g sat on the baseline.

Answer: The copy should contain every letter of the pangram in the same order. After copying, tick each letter from a to z. If j and g sit on the baseline, rewrite those two letters on a spare line so that their tails fall below the baseline, then copy the whole pangram again. The corrected copy should show j and g crossing the baseline while tall letters such as b, k, and l rise above the midline.
