Sight Word Recognition and Tracing Plates: A Combined Worksheet Design

Worked example / complete source key

A plate lists the words was, of, saw, off. The find grid contains: was, of, saw, off, was, off. The bank states was (2), of (1), saw (1), off (2). A learner circles was, of, saw, off, was, off. Check the recognition count and describe one tracing check for the word was using the stated convention.

Answer: Recognition check: was is circled twice, of once, saw once, off twice, matching the stated counts. Tracing check for was: confirm baseline contact of all letters, confirm the x-height band for w, a, and s, and confirm that no letter rises above the midline or falls below the baseline. Any style that meets these features is valid.
