Graphing Ellipses Worksheet: Center, Axes, and Foci

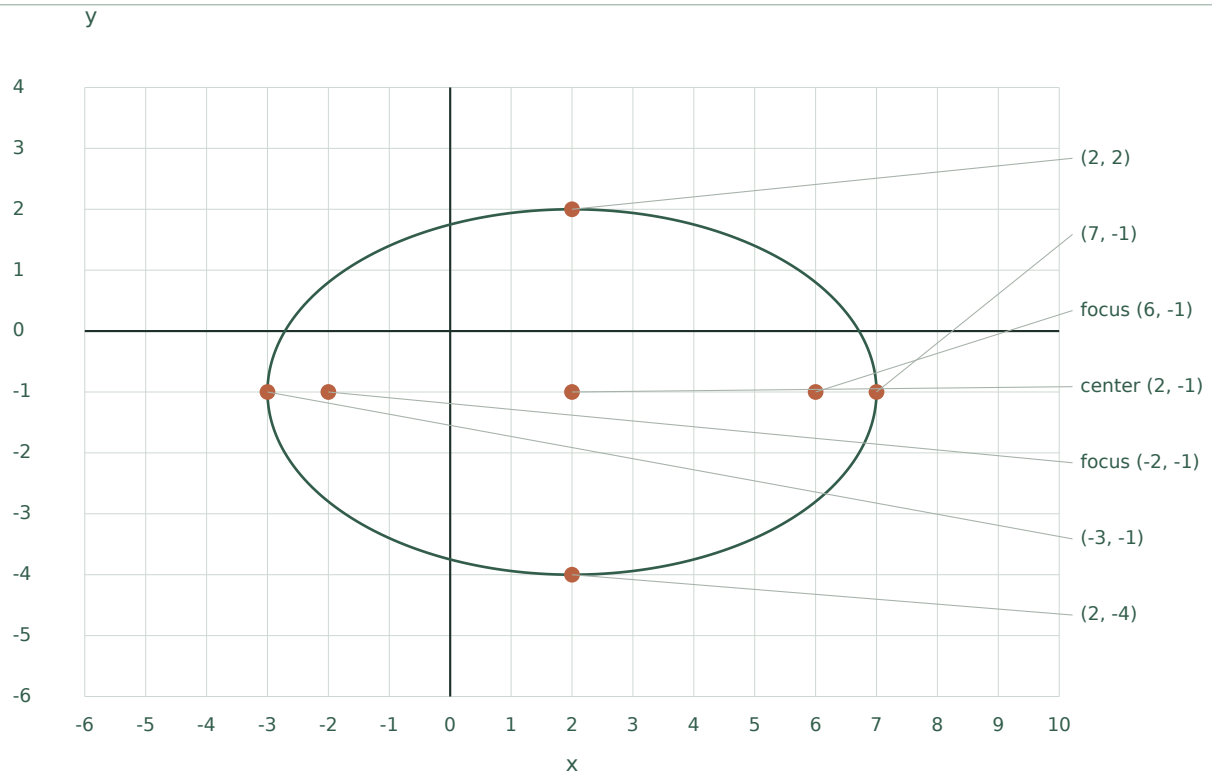

Original worked example / unchanged complete key

Prompt: Graph the ellipse (x - 2)^2 / 25 + (y + 1)^2 / 9 = 1. Identify the center, major and minor axes, vertices, co-vertices, and foci.

Answer: Center (2, -1). Larger denominator 25 is under x, so major axis is horizontal with a = 5 and length 10. Minor axis is vertical with b = 3 and length 6. Vertices: (2 ± 5, -1) = (7, -1) and (-3, -1). Co-vertices: (2, -1 ± 3) = (2, 2) and (2, -4). c^2 = 25 - 9 = 16, so c = 4. Foci: (2 ± 4, -1) = (6, -1) and (-2, -1). Sketch a smooth closed curve through the four axis endpoints, symmetric about x = 2 and y = -1.

Graphing Ellipses Worksheet: Center, Axes, and Foci

Worked example: ellipse (x - 2)^2/25 + (y + 1)^2/9 = 1

Reference sketch of the worked example with center, vertices, co-vertices, and foci labeled. Coordinate labels sit outside the plot; thin grey leaders are annotations, not function curves.
