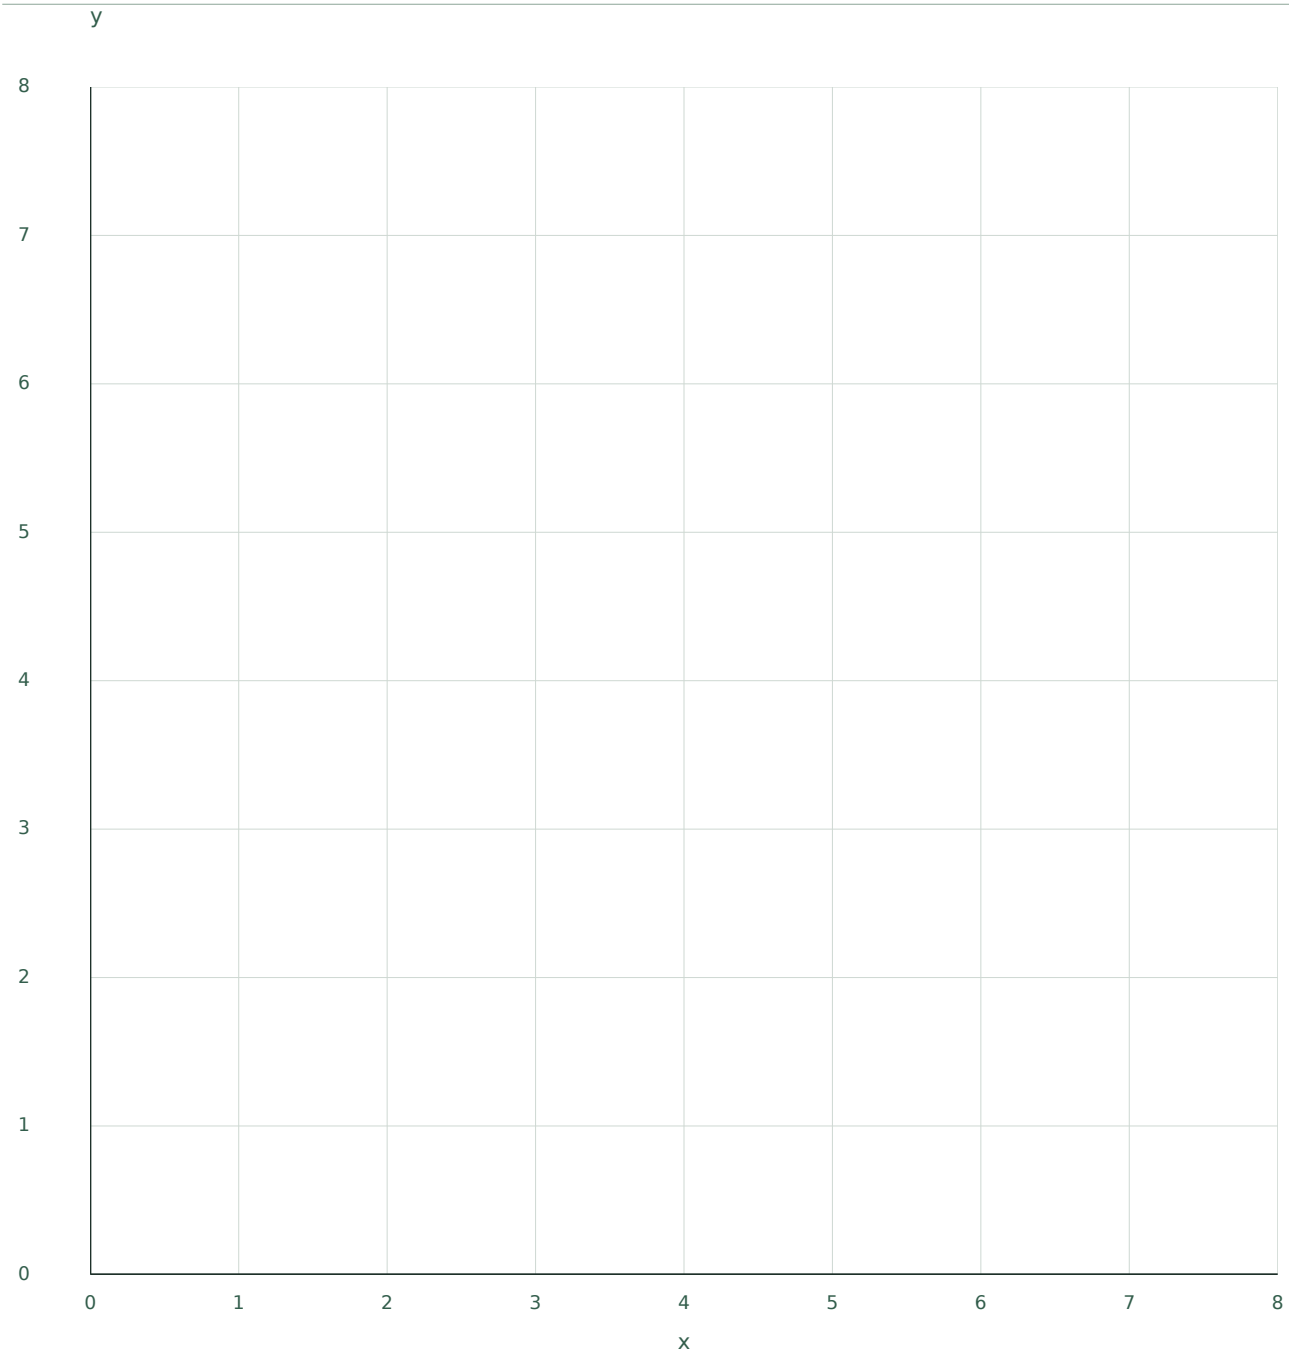

Graph Linear Programming Constraints and Shade the Feasible Region

Student Grid Template: Shade Your Own Feasible Region

Blank grid template for students to shade their own feasible region.

Graph Linear Programming Constraints and Shade the Feasible Region

Linear Programming Worksheet: Workshop Problem

One linear programming word problem with constraint list, blank grid, vertex-testing table, and blanks for objective function evaluation.

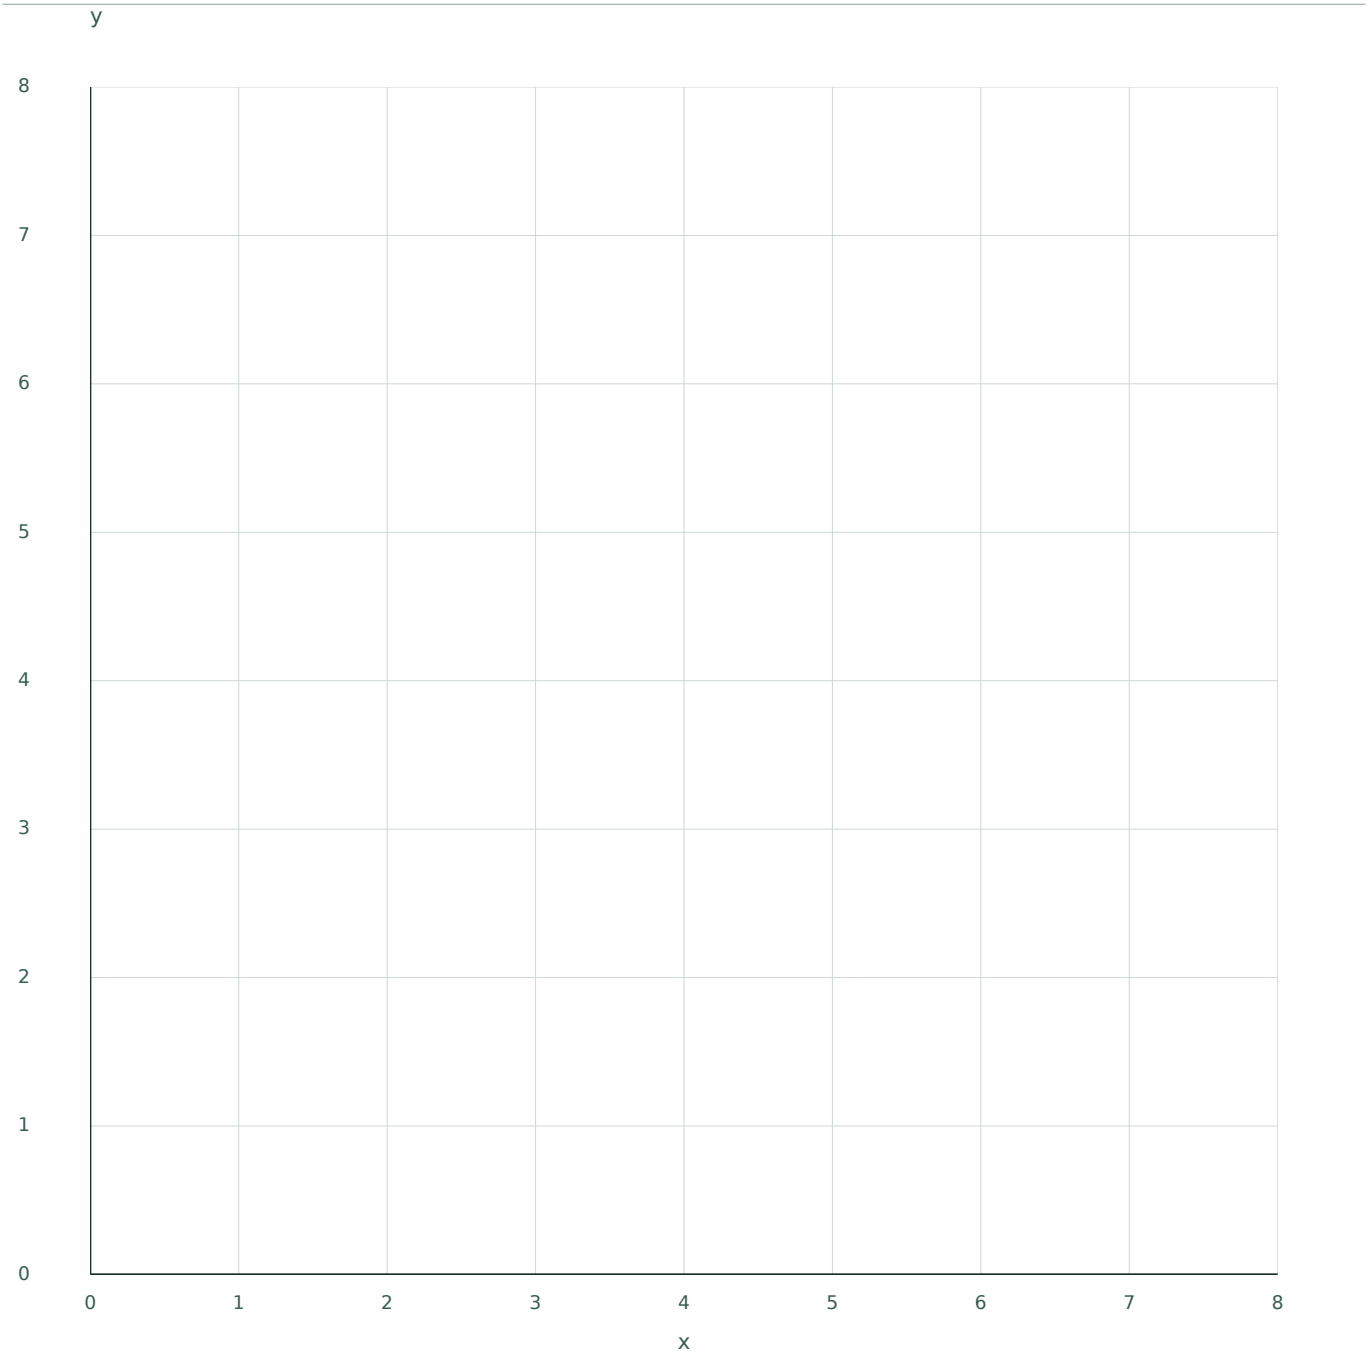

A workshop makes two products, A and B. Each unit of A uses 2 hours of labor and 1 unit of material; each unit of B uses 1 hour of labor and 2 units of material. There are 8 labor hours and 8 material units available. Profit is 3 per unit of A and 2 per unit of B.

Maximize profit subject to $2x + y \leq 8$, $x + 2y \leq 8$, $x \geq 0$, $y \geq 0$, where x is units of A and y is units of B.

Graph the constraints, shade the feasible region, list all vertices, and evaluate the objective function at each vertex. State the optimal vertex and value.

Graph Linear Programming Constraints and Shade the Feasible Region

Worksheet Grid: Graph the Constraints

Blank coordinate grid for graphing the worksheet constraints.

Graph Linear Programming Constraints and Shade the Feasible Region

Worksheet Vertex-Testing Table

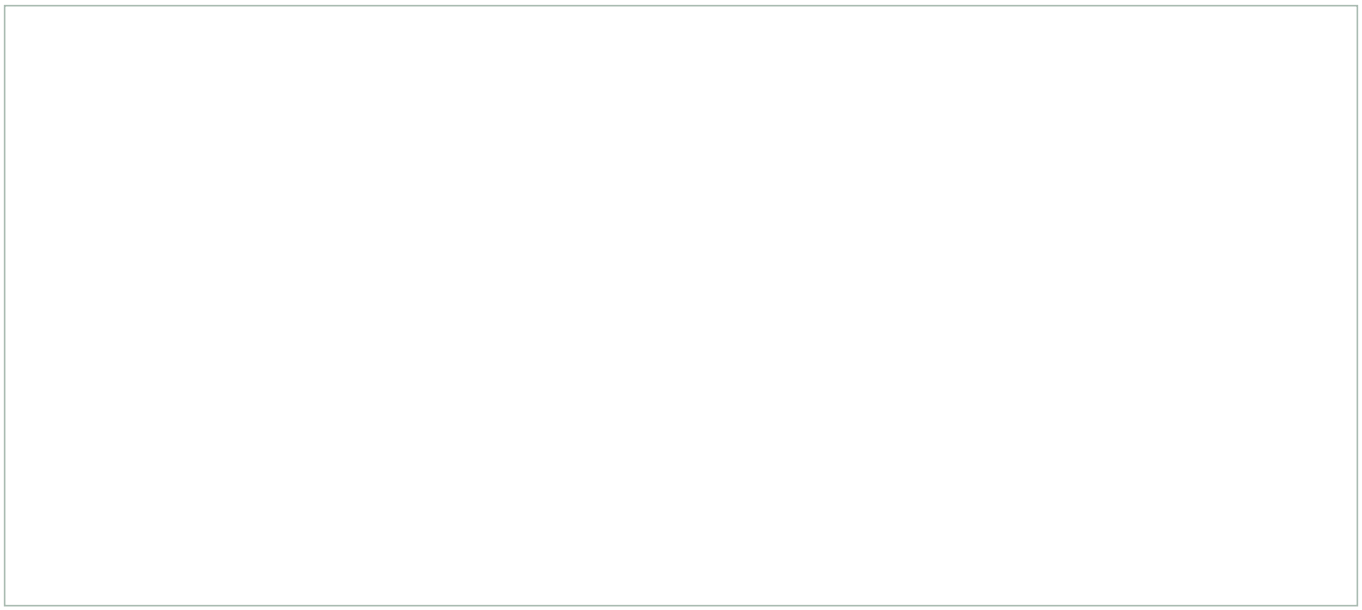

Vertex-testing table with columns for vertex, objective value, and decision.

Vertex	Objective Value P = 3x + 2y	Decision

Graph Linear Programming Constraints and Shade the Feasible Region

Worksheet Objective Function Evaluation Blanks

Blanks for objective function evaluation and final answer.

Graph Linear Programming Constraints and Shade the Feasible Region

Original tasks 1, 2, 3 / blank responses

Task 1

Maximize $P = 2x + 3y$ subject to $x + y \leq 4$, $x \geq 0$, $y \geq 0$. Graph the constraints, shade the feasible region, and find the optimal vertex and value.

Task 2

Minimize $C = 4x + y$ subject to $x + y \geq 3$, $x \leq 4$, $y \leq 3$, $x \geq 0$, $y \geq 0$. Graph the constraints, shade the feasible region, and find the optimal vertex and value.

Task 3

Maximize $P = x + 2y$ subject to $2x + y \leq 6$, $x + 2y \leq 6$, $x \geq 0$, $y \geq 0$. Graph the constraints, shade the feasible region, and find the optimal vertex and value.

Graph Linear Programming Constraints and Shade the Feasible Region

Original tasks 4 / blank responses

Task 4

Minimize C = 3x + 2y subject to x + y ≥ 2, x + 3y ≥ 3, x ≥ 0, y ≥ 0. Graph the constraints, shade the feasible region, and find the optimal vertex and value.
